British Aircraft Carriers 1939–45 RAF Fighter Command Pilot War and Power But Will It Fly? Junkers Ju 88 Kampfgeschwader in North Africa and the Mediterranean Commerce Business Daily Angus Konstam Mark Barber Phillips Payson O'Brien Iver P. Cooper John Weal

with war against germany looming britain pushed forward its carrier program in the late 1930s in 1938 the royal navy launched the hms ark royal its first ever purpose built aircraft carrier this was quickly followed by others including the highly successful illustrious class smaller and tougher than their american cousins the british carriers were designed to fight in the tight confines of the north sea and the mediterranean over the next six years these carriers battled the axis powers in every theatre attacking italian naval bases hunting the bismarck and even joining the fight in the pacific this book tells the story of the small but resilient carriers and the crucial role they played in the british war effort

the recent 70th anniversary of the battle of britain combined with the threat of significant cuts to the current raf have highlighted the importance of fighter command in the early days of world war ii once more the role of the few as described by churchill during the battle of britain has been the subject of much mythologizing both at the time and in the years since this title will put fighter command in context describing the lack of funding and attention which it received during the interwar period until it was almost too late the myth of the fighter pilot will be humanized with first hand accounts quoted which put nervous but brave human beings from all walks of life in the cockpit although the battle of britain may not have in itself been the decisive encounter that it has historically been portrayed as the moral victory won by the raf the victory that proved that germany could be defeated was just as important as a military strategic victory

phillips o brien is one of the keenest observers of modern strategy and his new book takes a deep historical look at the evolution of warfare and its implications for conflicts like the ongoing one in ukraine francis fukuyama war and power are two of the most widely discussed issues in all of human history and yet they are time and again misunderstood often disastrously so whilst we might think the outcome of war is determined by so called great powers who dominate their opponents with their impressive size and military prowess the reality of modern conflict as renowned strategic historian professor phillips payson o brien demonstrates is very different he urges us instead to look for full spectrum powers for if we are considering how powerful a nation is and who will win a war we need to think less about weapons and more about the economies and societies that produce them less about individual battles and more about sustaining campaigns and alliances in which states operate using fascinating examples from the late 19th century to the present day war and power explains how misunderstanding war and power has led to terrible even preventable conflicts such as the war in ukraine and how more accurate analysis can help us consider the potential conflict between the us and china war and power provides a bold new way of understanding the dangerous world around us phillips o brien is always fantastic heterodox he's pretty scathing even about biden administration policy a really interesting book paul krugman distinguished professor of economics as phillips o brien points out in this important book the character of war evolves but some of the underlying truths particularly from the second world war are still very much with us eliot cohen professor emeritus at johns hopkins sais

conventional aircraft today are propelled by the action of propellers or jets and powered by the internal combustion of petroleum fuels in piston turboprop or jet engines but other power sources powerplants and propulsion devices for airships as well as aircraft have been proposed and even experimented with over the last few centuries the power sources considered include human muscles steam batteries nuclear reactors and hydrogen fuel and the propulsion devices include sails oars flapping wings rockets and cycloidal

propellers this meticulously researched book presents the history of these unconventional aerial power and propulsion systems explains the underlying science and technology behind them and assesses the crucial question of practicality

a detailed history of the luftwaffe's best twin engined bomber of world war 2 in north africa and the mediterranean this volume follows the luftwaffe's wunderbomber southwards to describe its deployment in north africa and the mediterranean theatre of war early 1941 saw the first sporadic air raids on malta followed by the campaign in the balkans which resulted in the conquests of yugoslavia greece and crete after supporting land operations in north africa during the latter half of 1941 the ju 88s resumed their assault on malta bringing the story to life are personal accounts of the more famous actions the bombing of shipping off the coast of greece and the sinking of three royal navy destroyers south of crete all illustrated with rare photographs and full colour profiles
