evaluating measurement accuracy is intended for anyone who is concerned with measurements in any field of science or technology it reflects the latest developments in metrology and offers new results but is designed to be accessible to readers at different levels meteorologists engineers and experimental scientists who use measurements as tools in their professions graduate and undergraduate students in the natural sciences and engineering and technicians performing complex measurements in industry quality control and trade the material of the book is presented from the practical perspective and offers solutions and recommendations for problems that arise in conducting real life measurements this inclusion is a notable and unique aspect of this title as complex measurements done in industry and trade are often neglected in metrological literature leaving the practitioners of these measurements to devise their own ad hoc techniques

alsop and heinsohn present an analytic framework that can be used to measure and monitor empowerment processes and outcomes the measuring empowerment framework rooted in both conceptual discourse and measurement practice illustrates how to gather data on empowerment and structure its analysis the framework can be used to measure empowerment at both the intervention level and the country level as a part of poverty or governance monitoring the authors first provide a definition of empowerment and then explain how the concept can be reduced to measurable components empowerment is defined as a person s capacity to make effective choices that is the capacity to transform choices into desired actions and outcomes the extent or degree to which a person is

empowered is influenced by personal agency the capacity to make purposive choice and opportunity structure the institutional context in which choice is made asset endowments are used as indicators of agency these assets may be psychological informational organizational material social financial or human opportunity structure is measured by the presence and operation of formal and informal institutions including the laws regulatory frameworks and norms governing behavior degrees of empowerment are measured by the existence of choice the use of choice and the achievement of choice following the conceptual discussion and the presentation of the analytic framework the authors show how the measuring empowerment framework can be applied using examples from four development interventions each example discusses how the framework guided analysis and development of empowerment indicators they also present a draft module for measuring empowerment at the country level the module can be used alone or be integrated into country level poverty or governance monitoring systems that seek to add an empowerment dimension to their analysis this paper a product of the poverty reduction group poverty reduction and economic management network is part of a larger effort in the network to conceptualize operationalize and measure empowerment abstract
