this text presents organic chemistry information in the form of bulleted lists and tables it offers biological medicinal and environmental applications

a reactions oriented course is a staple of most graduate organic programs and synthesis is taught either as a part of that course or as a special topic ideally the incoming student is an organic major who has a good working knowledge of basic reactions

stereochemistry and conformational principles in fact however many often most of the students in a first year graduate level organic course have deficiencies in their undergraduate work are not organic majors and are not synthetically inclined to save students much time catching up this text provides a reliable and readily available source for background material that will enable all graduate students to reach the same high level of proficiency in organic chemistry produced over many years with extensive feedback from students taking an organic chemistry course this book provides a reaction based approach the first two chapters provide an introduction to functional groups these are followed by chapters reviewing basic organic transformations e g oxidation reduction the book then looks at carbon carbon bond formation reactions and ways to disconnect a bigger molecule into simpler building blocks most chapters include an extensive list of questions to test the reader's understanding there is also a new chapter outlining full retrosynthetic analyses of complex molecules which highlights common problems made by scientists the book is intended for graduate and postgraduate students scientific researchers in chemistry new publisher new edition extensively updated and corrected over 950 new references with more than 6100 references in total over 600 new reactions and figures replaced or updated over 300 new homework problems from the current literature to provide nearly 800 problems to test reader understanding of the key principles
