the goal of the symposium particulate carbon formation during combustion held at the general motors research laboratories on october 15 and 16 1980 was to discuss fundamental aspects of soot formation and oxidation in combustion systems and to stimulate new research by extensive interactions among the participants this book contains the papers and discussions of that symposium the 26th in an annual series covering many different disciplines which are timely and of interest to both general motors and the technical community at large the subject of this symposium has considerable relevance for man in his effort to control and preserve his environment emission of particulate carbon into the atmosphere from combustion sources is of concern to scientists and laymen alike the hope of reducing this emission clearly requires an understanding of its formation during the combustion process itself an area of considerable long term research interest it is our hope that this symposium has served to summarize what is known so that what remains to be learned can be pursued with greater vigor
