the essays appearing in these two volumes are based on keynote vol 1 and state of the art vol 2 lectures delivered at the xxvth international congress of psychology in brussels july 1992 the brussels congress was the latest in a series of conferences which are organized at regular intervals under the auspices of the international union of psychological science iupsys the main international organization in the field of scientific psychology the first of those meetings took place in paris in 1889 an important function of the international congresses is to promote communication between different specializations in psychology speakers were therefore asked to present lectures and discussions in their own fields of study in a way that would be accessible to fellow psychologists active in other fields state of the art lecturers were specifically asked to prepare a tutorial review on a topic which in the view of the program committee had recently given rise to particularly important developments these contributions are included in volume two keynote lecturers were left free to address whatever subject they felt was of greatest interest the chapters in volume 1 are preceded by the presidential address by mark r rosenzweig

this book is about explanation and experiment in a science of human action it aims to provide a philosophy of social psychological science that both embodies sound principles of scientific reasoning and is sensitive to the social psychological dimensions of human action the guiding principle of this book is the belief that the logical forms of causal explanation and experimental evaluation can be effectively employed in the scientific analysis of meaningful human action according to most accounts social psychological science has been in a more or less constant state of crisis for the past decades having been subject to a host of criticisms on moral political methodological and philosophical grounds many of these critiques have been directed against the still dominant conception of social psychological enquiry as a causal and objective scientific discipline that is closely analogous to if not to be identified as a branch of the natural sciences thus many of the most vigorous debates have concerned the nature of explanation and the utility of experimentation in a social psychological discipline

psychological science under scrutiny explores a range of contemporary challenges to the assumptions and methodologies of psychology in order to encourage debate and ground the discipline in solid science discusses the pointed challenges posed by critics to the field of psychological research which have given pause to psychological researchers across a broad spectrum of sub fields argues that those

conducting psychological research need to fundamentally change the way they think about data and results in order to ensure that psychology has a firm basis in empirical science places the recent challenges discussed into a broad historical and conceptual perspective and considers their implications for the future of psychological methodology and research challenges discussed include confirmation bias the effects of grant pressure false positive findings overestimating the efficacy of medications and high correlations in functional brain imaging chapters are authored by internationally recognized experts in their fields and are written with a minimum of specialized terminology to ensure accessibility to students and lay readers

presents key topics with an emphasis on experimental research and logic students will learn the importance of developing testable hypotheses how to evaluate new information critically and the impact of research on ourselves and our society

this book articulates how psychologists can use their theory research and intervention to generate insights into emancipatory social change that is necessary to solve social and psychological problems these include racism sexism civil rights poverty militarism education and politics psychology was not developed to directly address social issues it must therefore be reconceptualised to fulfil this aim in this book carl ratner makes use of vygotsky s psychological approach known as cultural historical psychology supplemented by martin baro s liberation psychology and the work of bourdieu and foucault to develop an emancipatory psychological theory this approach is then utilized to lay out a specific program of social and psychological emancipation this reconstructed psychological theory is also used to evaluate populist movements that aim at social and psychological emancipation rather posits that populism is inadequate to solve social and psychological problems because it misunderstands the nature of society and what it takes to improve society and psychology this is demonstrated through wide ranging examples including populist feminism populist socialism and populist distortions of liberation psychology and cultural historical psychology this lively critique opens a pathway for academic across the social sciences concerned with how their disciplines can be oriented toward understanding and solving social psychological problems and will appeal to wide readership including policy makers and social activists

this book explores the development of ideas in psychology s past it is the initial volume in a series intended to shape such ideas into a

valuable resource for the discipline's future scientists in general are known to ignore their own history considering it to be a graveyard of failures in thinking in psychological science selected ideas of key figures in the cognitive comparative and developmental sides of psychology karl duncker karl biihler tamara dembo zing young kuo c lloyd morgan alexander chamberlain and arnold gesell are traced and the social contexts of their ideas are given a collective analysis focusing on the potential of these ideas for the present state of psychology representing the scientist as hero has become a necessary component when applying for research monies from governmentally controlled funding agencies yet the reality is just the opposite science is not just the product of heroes it is the product of many individuals who often search for solutions to basic problems throughout their lifetimes while only a few arrive at breakthroughs still familiarity with the flow of thought in the efforts to solve the basic problems of humankind is necessary for any understanding of creativity this book analyzes the processes involved in the search for solutions to major theoretical problems of development kuo gesell action and cognition biihler bunker dembo and methodology morgan ultimately this is an exciting volume that reveals real science in the making thinking in psychological science will be of interest to students of the social sciences and intellectual history it is ideal for graduate and upper level undergraduate courses in psychology the sociology of science and cognitive science

why science matters understanding the methods of psychological research rises above standard research methods texts by presenting an up to date view of contemporary psychological science as it is currently understood and practiced explores not only the procedural aspects of psychological research but also delves into the issue of how to accomplish effective science explicates how hypotheses and theories are to be evaluated suggests that the proper approach to devising and evaluating theories is by abduction not by induction or deduction alone incorporates new investigatory procedures current methodologists conflicts and issues implications of the philosophy of science and a lively prose style provides a picture of science that will engage students and expand their abilities as both scientists and psychologists

it is our privilege to welcome you to the third canadian edition of an introduction to psychological science we would not have had this opportunity without the support and feedback of the instructors who have adopted this book for their classes and from their students and our own who have learned from this book why is it time for a third edition as you should already know psychological science progresses quickly and we want to ensure we represent significant advances or

theoretical challenges that are happening right now in addition there are examples and applications of psychological principles in the media all of the time and we want to include these in the learning experience whether in the text or in online activities while keeping the book up to date with the latest research and current events we also want to improve on our presentation of classic studies research methods and so on that remain in the foundation of our discipline this is where the feedback from our readers has been so important thanks to everyone who has shared what they have enjoyed about this book as well as what we might be able to do better we believe we have in fact done better
