bee wilson is the food writer and historian who writes as the kitchen thinker in the sunday telegraph and is the author of swindled her charming and original new book consider the fork explores how the implements we use in the kitchen have shaped the way we cook and live a wooden spoon most trusty and loveable of kitchen implements looks like the opposite of technology as the word is normally understood but look closer is it oval or round does it have an extra long handle to give your hand a place of greater safety from a hot skillet or a pointy bit at one side to get the lumpy bits in the corner of

the pan it took countless inventions to get to the well equipped kitchens we have now where our old low tech spoon is joined by mixers freezers and microwaves but the story of human invention in the kitchen is largely unseen discovering the histories of our knives ovens and kitchens themselves bee wilson explores among many other things why the french and chinese have such different cultures of the knife and why roman kitchens contain so many implements we recognize encompassing inventors scientists cooks and chefs this is the previously unsung history of our kitchens

technology is taking us to a world where myriads of heavily networked devices interact with the physical world in multiple ways and at many levels from the global internet down to micro and nano devices many of these devices are highly mobile and autonomous and must adapt to the surrounding environment in a totally unsupervised way a fundamental research challenge is the design of robust decentralized computing systems that are capable of operating in changing environments and with noisy input and yet exhibit the desired behavior and response time under constraints such as energy consumption size and processing power these systems should be able to adapt and learn how to react to unforeseen scenarios as well as to display properties comparable to social entities the observation of nature has brought us many great and unforeseen concepts biological systems are able to handle many of these challenges with an elegance and efficiency far beyond current human artifacts based on this observation bio inspired approaches have been proposed as a means of handling the complexity of such systems the goal is to obtain methods to engineer technical systems which are of a stability and efficiency comparable to those found in biological entities this special issue on biological and biologically inspired communication contains the best papers from the second international conference on bio inspired models of network information and computing systems bionet ics 2007 the bionetics conference aims to bring together researchers and scientists from several disciplines in computer science and engineering where bio inspired methods are investigated as well as

from bioinformatics to deepen the information exchange and collaboration among the different communities
