due to the interrelated impacts of tuberculosis and hiv diseases the who has recognised that additional interventions are urgently needed to support the directly observed treatment dots strategy for tb control tackling tb should include tackling hiv as the most potent force driving the tb epidemic whilst tackling hiv should include tackling tb as the leading killer of people living with hiv aids this publication sets out a framework for tb hiv treatment in the western pacific region which carries up to one third of the global tb burden drawing upon the who global framework and building upon the strengths of individual national tb and aids programmes in the region

providing the latest information on preventive diagnostic and therapeutic aspects of tuberculosis and aids this is the only book to place a major emphasis on the increasing coexistence of these two life threatening diseases in individuals edited by outstanding scientists in the field this ready reference is divided into three main sections covering immunology and vaccination strategies drugs and clinical issues timely reading for microbiologists virologists bacteriologists immunologists and pathophysiologists as well as for the pharmaceutical and biotechnological industries

this manual is designed for health professionals working in high hiv and tb prevalence countries it summarises the characteristics of both diseases and their interactions it concentrates particularly on the problems of diagnosis and management both in adults and children and summarises the other hiv related illnesses the clinician might encounter

aids and tuberculosis tb have complex health and societal determinants with large impacts world wide the burden of these infectious diseases are huge especially in the 22 countries with a high tb burden where more than 80 of tb world wide occurs and in sub saharan africa where 67 of the world s hiv aids cases occurred despite different ways of transmission and the fact that several separate national programs often exist tuberculosis and hiv aids are linked they are often affecting similar population groups e g vulnerable and other minorities groups and hiv is the most potent risk factors in increasing the risk of progression from latent tb infection ltbi to disease among the two billions individuals estimated with ltbi

world wide while the relative risk of hiv is over 20 therefore it is crucial to combine and co ordinate the efforts when addressing tb and hiv issues diverse responses have been developed both at international and country levels for tackling the different health and social components of these diseases

aids and tb the deadly two are public health concerns that have devastated the global village with africa being grossly affected and accounting for more than 70 of the human tragedy there is no cure for aids there is a cure for tb despite this very basic fact millions of people do not have the knowledge to prevent hiv infections that causes aids in the same vein more than two million people die every year due to tb alone and half a million due to tb combined with aids this book is about tb hiv infections and aids education aiducation it is about empowering communities to prevent tb and hiv infections it is about caring for those living with tb hiv and aids this book is about taking control of tb which can lead to preventing new tb and hiv infections this is a true african story

in the united states tb and hiv are widespread epidemics the highest prevalence of both diseases remains concentrated in urban centers while the total number of tb cases reported in the u s decreased by 6 4 percent from 1994 to 1995 cases increased among foreign born persons since 1989 tb screening for all people infected with hiv has been the recommended standard of care the federal government combats tb and hiv with direct assistance and financial support to state and local governments the health resources and services administration hrsa and the centers for disease control and prevention cdc administer separate federal funding streams for hiv and tb respectively through hrsa s title i programs and cdc s division of tb elimination programs more than 230 separate funding agreements exist between the federal government and states territories and cities clearly coordination and collaboration among hiv aids programs and tb prevention and control programs at the local state and federal levels are essential if there is to be an effective response to the increase in hiv related tb yet the extent to which these programs are working together to improve expand and coordinate services and thus decrease the occurrence of tb is largely unknown hrsa initiated and funded this study to better understand relationships between hiv aids and tb programs in title i eligible metropolitan areas

with the rapid development of economy and international communication world population mobility increase significantly as migrating population is one of vulnerable populations to infectious diseases strengthening monitoring system

and intervention approaches will be a key factor in controlling the spread of infectious diseases this book is intended to provide valuable information on creating effective prevention and intervention strategies of tuberculosis taking shenzhen one of typical immigrant cities as an example followed by overview of tuberculosis the control strategy diagnosis and treatment of tuberculosis drug resistant tuberculosis and hiv associated tuberculosis in migrating population is introduced in addition application of innovative technologies for example internet molecular biology and artificial intelligence in tuberculosis control is presented it will be a useful reference for practitioners in centers for infectious disease control and prevention hospitals academic institutions as well as staff in government agencies and non government organizations with interests in tuberculosis prevention and control

many people including those living with hiv do not know that tb is curable this is a basic message and one thing that is failing to get through we should know how to get the message to policy makers and funders that more drugs are needed for both diseases it is not either or there is no point providing arvs only for patients to die of tb for lack of tb resources similarly tb efforts alone are insufficient hiv aids is dramatically fuelling the tb epidemic in sub saharan africa where up to 70 of tb patients are co infected with hiv in some countries for many years efforts to tackle tb and hiv have been largely separate despite the overlapping epidemiology improved collaboration between tb and hiv aids programmes will lead to more effective control of tb among hiv infected people and to significant public health gains

the tb and hiv aids epidemics in the russian federation describes the socioeconomic conditions in the russian federation and examines how they are influencing infectious disease epidemics it also discusses the impact of the epidemics on the population including the incidence and prevalence in the general and prison populations finally this paper presents a description of a mathematical model of improvements in health status possible under various tb control strategies with implications for hiv aids as well

this book deals with tuberculosis in exhaustive detail it incorporates the most recent research on the disease and is divided into different sections highlighting the chronological history of its development global spread the current scenario in india with regards to the disease seasonality co infection with hiv aids and the novel combinatorial therapy with special reference to underprivileged and tribal

populations avoiding lengthy and irrelevant descriptions it will help the reader particularly students to grasp the facts the book is supplemented with figures and ray diagrams to allow full visualisation of the concepts discussed
