with his knack for translating science into understandable anecdotal prose and his trademark dry humor award winning science writer charles seife presents the first narrative account of the history of fusion for general readers in more than a decade tracing the story from its beginning into the twenty first century sun in a bottle reveals fusion s explosive role in some of the biggest scientific scandals of all time throughout this journey he introduces us to the daring geniuses villains and victims of fusion science with the giant international fusion project iter international thermonuclear experimental reactor now under construction it s clear that the science of wishful thinking is as strong as ever this book is our key to understanding why

unraveling the role of fusion in the universe has taken almost a century since einstein s proof of the equivalence of energy and matter in 1905 the discovery that fusion reactions are responsible for the building of the light elements in the big bang and the subsequent development of the heavier elements in the stars and in exploding supernovae is one of the field s most exciting successes in this engaging book mccracken and stott reexamine these discoveries in astrophysics and discuss the possibility that fusion reactions are not only our sun s source of power but may also be induced for our use on earth details the initial discovery of nuclear fusion all related research and today s concern over future energy supply examines current attempts to create nuclear fusion here on earth enhanced with color illustrations and examples provides a non technical treatment of fusion using straightforward language includes technical notes for aspiring physicists

this textbook accommodates the two divergent developmental paths which have become solidly established in the field of fusion energy the process of sequential tokamak development toward a prototype and the need for a more fundamental and integrative research approach before costly design choices are made emphasis is placed on the development of physically coherent and mathematically clear characterizations of the scientific and technological foundations of fusion energy which are specifically suitable for a first course on the subject of interest therefore are selected aspects of nuclear physics electromagnetics plasma physics reaction dynamics materials science and engineering systems all brought together to form an integrated perspective on nuclear fusion and its practical utilization the book identifies several distinct themes the first is concerned with preliminary and introductory topics which relate to the basic and relevant physical processes associated with nuclear fusion then the authors undertake an analysis of magnetically confined inertially confined and low temperature fusion energy concepts subsequently they introduce the important blanket domains surrounding the fusion core and discuss synergetic fusion fission systems finally they consider selected conceptual and technological subjects germane to the continuing development of fusion energy systems
