this book provides a detailed analysis of two major aspects glottalization and nasalization of the phonology and phonetics of coatzospan mixtec as well as an overview of the segmental phonology of the language from a descriptive perspective this work provides the first published phonetic data on coatzospan mixtec one of the many underdescribed indigenous languages of the americas of theoretical importance the phonological analyses of glottalization and nasalization serve as examples of how optimality theory can be implemented in the extended treatment of a single language in contrast to the typological emphasis of most optimality research by focusing in detail on the whole of nasalization and glottalization systems the book explores the implications of optimality theory for the traditional notion of underlying representation in phonological theory and motivates an extension of the mechanism of constraint conjunction to include conditional relations holding between distinct constraints in the grammar at the same time the phonetic analyses provide an

example of a detailed treatment of the phonetic implementation of nasalization and glottalization in the windows framework of special interest here is the relation between phonetic data and phonological feature specification in particular the data illustrate the complexity of the relationship between patterns of phonetic implementation and feature specification and lead to the conclusion that phonetic data must be interpreted in the context of the phonological system from which they are derived this book is of interest to linguists in general and especially to researchers in both phonology and phonetics to those interested in field work on underdescribed languages and to those interested in native american languages and linguistics

somali is probably the best documented in linguistic terms of all of the cushitic languages much work has been undertaken on the syntax and the morphology of the language however when it comes to the phonology of the language there is a distinct lack the aim of this thesis is to help fill that gap this will be done by taking the generative theory of lexical phonology as a basis of a model of somali phonology within that overall framework a model of melodic representation will be proposed as well as a model of prosodic representation the proposals are made specifically with the somali language in mind and explanations of certain aspects of somali phonology will be set out both in the chapters discussing the models of representation as well as in the chapter specifically dealing with the explanation of a number of phonological phenomena manifested in the inflectional morphology of the language the thesis does not cover the whole set of phonological phenomena manifested in somali nor does it set out to produce a universal model of phonology as far as somali is concerned it is hoped the work will provide a convenient springboard for the future study of phonological phenomena in somali as far as universal phonological matters are concerned it is hoped that the model proposed here for somali will be another step in the continuing search for universal explanatory aspects of phonology chapter one introduces the language and the main theoretical assumptions chapters 2 and 3 introduce the models of melodic representation and prosodic representation respectively chapter 4 provides explanations for certain phonological phenomena manifested in the inflectional morphology of somali chapter 5 brings the whole together and looks forward to the future study of somali phonology in light of this thesis
