this volume explores the breadth and interdisciplinarity of human evolution studies presenting 20 interviews with scholars covering the broad scientific themes of quaternary and archaeological science palaeolithic archaeology biological anthropology and palaeoanthropology primatology and evolutionary anthropology and evolutionary genetics

this second volume reports another twenty interviews with scholars at the forefront of human evolution research covering the broad scientific themes of palaeolithic archaeology palaeoanthropology and biological anthropology earth science and palaeoclimatic change evolutionary anthropology and primatology and human disease co evolution

this study discusses the evolution of the corinthian capital in antiquity and how this centred around alexandria rather than mainland greece it tackles the rise of the corinthian capital in classical greece and its adaptation on in hellenistic alexandria

this book offers a holistic framework to study behavior and evolutionary dynamics in large scale decentralized and heterogeneous crowd networks in the emerging crowd cyber ecosystems millions of deeply connected individuals smart devices government agencies and enterprises actively interact with each other and influence each other s decisions it is crucial to understand such intelligent entities behaviors and to study their strategic interactions in order to provide important guidelines on the design of reliable networks capable of predicting and preventing detrimental events with negative impacts on our society and economy this book reviews the fundamental methodologies to study user interactions and evolutionary dynamics in crowd networks and discusses recent advances in this emerging interdisciplinary research field using information diffusion over social networks as an example it presents a thorough investigation of the impact of user behavior on the network evolution process and demonstrates how this can help improve network performance intended for graduate students and researchers from various disciplines including but not limited to data science networking signal processing complex systems and economics the book encourages researchers in related research fields to explore the many untouched areas in this domain and ultimately to design crowd networks with efficient effective and reliable services

this splendid compendium will be the standard reference work for years to come a handbook to browse to consult to look things up in and to read with pleasure wonder and post darwinian exhilaration richard dawkins this is a marvellous book it should be in every university library preferably in several copies and every reader of this journal should add it to their next grant application it really is that good i have already found this book to be invaluable for many years to come these two volumes will be the starting point for anyone wishing to find out about virtually any subject relating to human genetics any scientist working on humans or other animals will find many things in these pages that will stimulate inform and inspire the authors editors and publishers are to be congratulated for their work order a copy now human genetics

the publishers and editors deserve to be congratulated for publishing this major book which coincides with the 200th anniversary of the birth of Charles Darwin. The book is well timed with biologists, theologians and sociologists engaged in intense debate on the Darwinian theory on the origin of species, evolution and natural selection. There is little doubt that this marvellous publication should be in the library of universities and academic institutions dealing with basic and applied biology research and education. It will not be surprising if the individual academic or researcher decides to invest in this resource and enrich their personal collection of leading books in genetics and genomics, genomic medicine, a unique collection of high quality articles derived from the acclaimed encyclopedia of life sciences, the revolution in human molecular genetics which has taken place over the last three decades has yielded a wealth of information not only on the structure and function of our genes but also on gene expression, mutation and polymorphic variation. Over the last five years the focus has moved from genes to genomes. Even though the annotation of our 30 000 genes is still in progress, genome wide studies have already yielded abundant evidence for the signatures of past selection and adaptive evolution within human gene sequences. Further the completion of the sequencing of the 3 billion base pair human genome coupled with the increasing availability of other vertebrate genome sequences has ushered in a new era of comparative genomics. We are now able to identify many of the molecular events from the chromosomal level down to the single base pair that have occurred during vertebrate, mammalian, primate and hominid evolution. Indeed the detailed comparison of the human and chimpanzee genomes has begun to reveal some of the genetic changes that have been involved in the development of human lineage specific traits. We are thus acquiring the ability to ask searching questions about our origins, about the demographic processes associated with the global radiation of humankind as well as some of the unique adaptations that make us human. Evolutionary biology has become so broad that its impact may be felt across the spectrum of the biological sciences. The aim of the handbook of human molecular evolution is relatively straightforward to bring together under the same cover the many and varied strands of our knowledge of human, primate, vertebrate molecular evolution. Hence the 282 chapters that comprise this essential reference work have been thematically arranged into twelve sections covering the whole scope of research into human molecular evolution: general concepts in evolutionary genetics, mutation, adaptation and natural selection, evolutionary and population genetics, human evolution, human genome evolution, evolution of human gene structure and function, evolution of gene expression, mitochondrial genome evolution, chromosomal evolution, comparative genomics, evolution and disease, susceptibility analysis of ancient DNA. This conceptual outline informed the selection of the chapters themselves and the connections between them. Some of these chapters are intended to be introductory, aimed at undergraduates and non specialists, they provide basic information and a list of recommended further reading to encourage the reader to explore a topic in more depth. This approach helps the student reader progress from textbook material to primary literature. Some chapters are overviews that address topics of broad interest and importance while others focus on quite specialized topics. These chapters are written for postgraduate students and research workers, they contain more detailed information and key references allowing the reader to investigate a specific area in more depth. This format allows professionals to use the books as a

quick reference source the chapters are richly supplied with website information to allow access to relevant data sources over the internet the self contained peer reviewed articles in this unique handbook have been written by leading scientists in each field key topics include the evolution of enzyme function the use of nucleic acid divergence as a molecular clock the origin of non functional or junk dna the role of gene duplication in the emergence of novel gene function and the identification of molecular changes responsible for various human characteristics especially those pertaining to infection cognition disease and disease susceptibility the handbook of human molecular evolution has adopted an integrated approach to the study of human evolution and seeks throughout to emphasize the interplay between molecular genetic concepts and principles on the one hand and information acquisition and interpretation on the other in this way it is hoped that the documents of evolutionary history written into the fabric of our genome will become accessible to the widest possible audience
