annotation there is a maximum power and energy that you can put into or transmit through your optical system in many cases this maximum is well below the laser induced damage threshold this tutorial explains the factors and constraints that limit the power and energy handling capability of optical materials components and or systems because the lasers coming off the production lines are much more stable efficient and controlled than in the past today s engineers often do not have the insight into the technology as was required of first generation laser engineers however important insights into the use and performance of the laser and optical systems can be lost unless we remind ourselves at periodic intervals of the problems our predecessors had to face

this title details the essential roles that small telescopes should play in 21st century science and how their future productivity can be maximized over 70 experts from all corners of the international astronomical community have created a reference on the future of big science with small telescopes at national facilities and their omission from national science priority studies the oft lamented demise of the small telescope has been greatly exaggerated in fact the future of these workhorses of astronomy will be brighter than ever if creative steps are taken now this three volume set defines essential roles that small telescopes should play in 21st century science and the ways in which a productive future for them can be realized a wide cross section of the astronomical community has contributed to a definitive assessment of the present and a vision for

the future radio and space based facilities face problems in scientific prioritization and funding it highlights how current small facilities are evolving to meet the scientific priorities and economical realities of the 21st century through standardization of instrumentation use of off the shelf technology specialization optical improvements new modes of scheduling automation and internet access
