now in paperback this text covers the dramatic developments that have occurred in basic neuroscience and clinical research in cognitive neurology and dementia the text is based on the clinical approach to the patient and provides essential knowledge that is fundamental to clinical practice

the world is beset by a pandemic of obesity and type 2 diabetes and the need for new drugs is startlingly clear recent years have seen a huge increase in research activity to fill this gap the development of new drugs for diabetes and obesity must be founded upon a sound appreciation of the pathophysiology of these common disorders the dual defects of insulin resistance and impaired insulin secretion are fundamental to the pathogenesis and progression of obesity associated type 2 diabetes there is a need to explain how new drugs can counter insulin resistance and insulin deficiency to a broad range of professionals from clinical scientists active in early and later phase drug development to specialist physicians and increasingly primary care doctors who must tailor drug regimens to the individual patient clinical research methods for measuring insulin action and insulin

secretion have become well established in proof of mechanism studies however selection of the best techniques is by no means straightforward the purpose of the book is to aid the selection of the most appropriate techniques for assessing insulin action insulin secretion and body composition in humans with particular reference to new drugs in phase 1 and 2 studies and aid the understanding of drug effects and non drug treatment strategies on key biochemical hormonal defects of obesity and type 2 diabetes the book will assume a working knowledge of human physiology relating to glucose metabolism and will be of interest to biomedical scientists pharmacologists academics involved in metabolic research and clinicians practicing in these specialties

the book studies specific aspects of urban planning and environmental management aiming to provide actionable insights and solutions this book opens with an analysis of urban processes and the development of mass housing estates using famagusta cyprus as a case study it highlights how topographical factors influence urban growth and housing patterns providing important implications for infrastructure planning a significant focus is placed on the development of environmentally friendly building materials several chapters explore the use of waste products such as cork in creating sustainable materials green and blue infrastructure also receive substantial attention the book addresses strategies for integrating these elements into urban environments to combat climate change topics such as the retention capacity of green roofs and the role of vegetation in improving urban air quality underscore the importance of ecological infrastructure in creating resilient cities the book further studies urban climate and pollution analysis presenting advanced methods for monitoring and managing environmental conditions chapters on climate change monitoring air pollution assessment through bryophytes and vocs monitoring provide tools for understanding and addressing urban environmental challenges human centric design is another key theme with discussions on pedestrian comfort and walkability in urban spaces by focusing on outdoor promenades and thermal comfort the book highlights the need for urban designs that enhance the quality of life for residents practical approaches to project management and planning are also covered the book introduces methodologies such as pert cpm and monte carlo simulation techniques for improving project outcomes and developing criteria for climate friendly planning competitions finally the preservation of landscape heritage amidst urban expansion is explored a methodology for creating a landscape catalog in arequipa peru is presented as a way to balance development with the conservation of cultural and natural landscapes

offering the latest information in magnetic nanoparticle mnp research this book builds upon the success of the first volume and provides an updated and comprehensive review from synthesis characterization and biofunctionalization to clinical applications of mnps including the diagnosis and

treatment of cancers the book captures some of emerging research area which was not available in the first volume good manufacturing practices and commercialization of mnps are also included this volume also written by some of the most qualified experts in the field incorporates new developments in the literature and continues to bridge the gaps between the different areas in this field

this book entitled advances in animal biotechnology is a compilation of state of the art in the field of animal biotechnology including fishery that are not sheltered in depth in earlier publications it offers an update on avant garde technologies and advances in key aspects of genetic engineering metagenomics assisted reproduction animal genomics biotechnology in veterinary health as well as the role of gut and marine microbial ecosystems in livestock and industrial development the book is divided broadly into five different sections viz gut microbiome and nutritional biotechnology assisted reproduction biotechnology livestock genomics health biotechnology and animal biotechnology in global perspective the book covers the syllabi of animal biotechnology courses in various universities academia and competitive examinations at various levels researchers continuing graduates and academicians research institutions and biotech companies will be benefited from this valuable compilation of research its broad spectrum makes this work a valuable resource for professionals researchers academics and students in the field of veterinary and animal production as well as the biotechnology industry
