this book explores an organic vision of company innovation through an analogy with dna and its four nitrogenous bases like all living organisms a company has the fundamental genetic bases of its ability to innovate this dna mutates under both environmental influences and evolutionary factors allowing a company to develop new patterns of behaviour at the dawn of the 21st century the result of this process is the emergence of what we could call the hyperconnected company through this ongoing metaphor the book provides decision makers with several paths along which to increase their ability to innovate taking advantage of genetic bases such as their own factors of change the study is based on observations made of large companies for whom innovation is an absolute imperative it alternates theoretical analyses with concrete illustrations and spotlights innovation leaders such as louis vuitton 3m bouygues telecom bnp paribas siemens danone air liquide to name but a few
