articles in this collection are devoted to modern problems of topology geometry mathematical physics and integrable systems
and they are based on talks given at the famous novikov s seminar at the steklov institute of mathematics in moscow in 2012
2014 the articles cover many aspects of seemingly unrelated areas of modern mathematics and mathematical physics they
reflect the main scientific interests of the organizer of the seminar sergey petrovich novikov the volume is suitable for graduate
students and researchers interested in the corresponding areas of mathematics and physics

this is the first supplementary volume to kluwer s highly acclaimed encyclopaedia of mathematics this additional volume contains
nearly 600 new entries written by experts and covers developments and topics not included in the already published 10 volume
set these entries have been arranged alphabetically throughout a detailed index is included in the book this supplementary
volume enhances the existing 10 volume set together these eleven volumes represent the most authoritative comprehensive up
to date encyclopaedia of mathematics available

this is a book guaranteed to delight the reader it not only depicts the state of mathematics at the end of the century but is also
full of remarkable insights into its future development as we enter a new millennium true to its title the book extends beyond the
spectrum of mathematics to include contributions from other related sciences you will enjoy reading the many stimulating

contributions and gain insights into the astounding progress of mathematics and the perspectives for its future one of the editors björn eng quist is a world renowned researcher in computational science and engineering the second editor wilfried schmid is a distinguished mathematician at harvard university likewise the authors are all foremost mathematicians and scientists and their biographies and photographs appear at the end of the book unique in both form and content this is a must read for every mathematician and scientist and in particular for graduates still choosing their specialty

with the rapid development of science and technology the computer has become an important tool in many science fields particularly symbolic computation which is one of the most exciting and challenging areas it has been applied in many sciences such as mathematics physics chemistry biology mechanics engineering etc in particular non linear sciences and complex sciences nowadays many symbolic computation softwares have been used to deal with these problems up to now there have existed many non linear differential difference systems related to solitons and chaos in the non linear science field in order to understand these complex physical phenomena it is important to research some of their basic properties because of the complexity of these non linear systems with the symbolic computation this new book presents important research on non linear differential difference systems related to solitons and chaos as well as other non linear sciences in views of constructive algorithms
