this is a systematic exposition of introductory school algebra written specifically for common core era teachers the emphasis of the exposition is to give a mathematically correct treatment of introductory algebra for example it explains the proper use of symbols why variable is not a mathematical concept what an equation is what equation solving means how to define the slope of a line correctly why the graph of a linear equation in two variables is a straight line why every straight line is the graph of a linear equation in two variables how to use the shape of the graph of a quadratic function as a guide for the study of quadratic functions how to define a parabola correctly why the graph of a quadratic function is a parabola why all parabolas are similar etc this exposition of algebra makes full use of the geometric concepts of congruence and similarity and it justifies why the common core standards on algebra are written the way they are

this is the second of three volumes that together give an exposition of the mathematics of grades 9 12 that is simultaneously mathematically correct and grade level appropriate the volumes are consistent with ccssm common core state standards for mathematics and aim at presenting the mathematics of k 12 as a totally transparent subject the first part of this volume is devoted to the study of standard algebra topics quadratic functions graphs of equations of degree 2 in two variables polynomials exponentials and logarithms complex numbers and the fundamental theorem of algebra and the binomial theorem having translations and the concept of similarity at our disposal enables us to clarify the study of

quadratic functions by concentrating on their graphs the same way the study of linear functions is greatly clarified by knowing that their graphs are lines we also introduce the concept of formal algebra in the study of polynomials with complex coefficients the last three chapters in this volume complete the systematic exposition of high school geometry that is consistent with ccssm these chapters treat the geometry of the triangle and the circle ruler and compass constructions and a general discussion of axiomatic systems including non euclidean geometry and the celebrated work of hilbert on the foundations this book should be useful for current and future teachers of k 12 mathematics as well as for some high school students and for education professionals

this book addresses college students weak foundation in algebra its causes and potential solutions to improve their long term success and understanding in mathematics as a whole the authors who are experts in a wide variety of fields emphasize that these difficulties are more complex than just forgotten rules and offer strategic approaches from a number of angles that will increase the chances of student understanding instructors who are frustrated with their students lack of skills and knowledge at college level will find this volume helpful as the authors confront the deeper reasons why students have difficulties with algebra and reveal how to remedy the issue

this book is inspired by roger e howe s contributions to the international communities of mathematics and mathematics education renowned for his research contributions in the fields of representation theory automorphic forms harmonic analysis and invariant theory dr howe has also fundamentally deepened our understanding of the mathematics taught in the early school grades and has challenged and stimulated mathematicians and mathematics educators to work together to examine this part of the mathematical universe more critically and in imaginative new ways this volume will help summarize

and highlight howe s contributions to several topic areas in mathematics education demonstrating the possibility and importance of engaging mathematicians in high impact research in mathematics education and showcasing the importance of cross disciplinary collaboration and exchange
