The physics of grip and traction, explained in a way that makes perfect sense.

The subtle art of braking, turning a corner, and accelerating out of it with maximum efficiency.

Racecraft and strategy, understanding how to read your competitors and the track.

The importance of driver psychology and mental preparation.

This book has the unique ability to ignite a spark within you, whether that's a newfound appreciation for the complex dance of race driving or a desire to understand the dedication it takes to excel. i do not believe that any book or any amount of training of the kind given in competition driving courses will make a good driver of anyone who does not possess a fundamental inborn aptitude above a certain level driving becomes a sport demanding of its adepts instant and accurate reflexes combined with perfect judgement in this sphere only those who enjoy an outstanding natural gift and who take a profound interest in the subject will ever reach the top for this reason i had some hesitation before writing this book i thought for instance of stirling moss mike hawthorn tony brooks or jim clark who all started winning races in their very first season of serious racing at an age when they could have had comparatively little driving experience at all but surely they are exceptions and between the two extremes of the born champion and the hopeless incompetent there must be hundreds of good drivers who even if they cannot hope to emulate potential world champions might gain immense satisfaction from taking part in all sorts of motoring events these are the non professionals who as a rule cannot devote much time to their motoring activities and who will surely greatly benefit from all the experience that can be passed on to them thereby reducing the time necessary for satisfying results to be achieved in whatever sort of competition they intend to enter if they have analytical minds they will probably also like to have a better knowledge of the basic physics governing the behaviour and the attitude of their car on the road which in turn will help them drive it to better purpose the greater part of this book deals with racing rather than rallying or any other sort of competition in which a time element is involved this is not only because i consider circuit racing to be motor sport in its purest form where few factors other than achieving the highest possible speed over a given distance are involved but also because all the general rules of racing apply basically to any other sort of driving after incidentals such as lack of previous knowledge of the road and the presence on it of other traffic and so on have been taken into account i therefore think that a better
