this book constitutes the proceedings of the second international conference on optimization learning algorithms and applications ol2a 2022 held in bragan□a portugal in october 2022 the 53 full papers and 3 short papers were thoroughly reviewed and selected from 145 submissions they are organized in the topical sections on machine and deep learning optimization artificial intelligence optimization in control systems design measurements with the internet of things trends in engineering education advances and optimization in cyber physical systems and computer vision based on learning algorithms

this book is a collection of selected papers presented at the fifth congress on intelligent systems cis 2024 organized by christ deemed to be university bangalore india under the technical sponsorship of the soft computing research society india during september 4 5 2024 the book covers high quality research articles in the fields of soft computing machine vision robotics computational intelligence artificial intelligence signal and image processing data science techniques and their real world applications which are some of the recent advancements in the real world technologies

developments in deep learning in the past decade have led to phenomenal growth in ai based automated medical diagnosis opening a door to a new era of both medical research and medical industry it is a golden age for researchers involved in the development and application of advanced machine learning techniques for medical and clinical problems this book captures the most recent important advances in this cross disciplinary topic and brings the latest advances to a wide audience including experts researchers students industry developers and medical services

this book represents the proceedings of the 3rd international conference on statistics applied mathematics and computing science csamcs 2023 held from november 10th to 12th 2023 in nanjing china hosted by nanjing university this conference proceedings aims to encapsulate the essence of the conference by featuring papers that discuss topics such as computational mathematics and numerical analysis it serves as a repository of research presented at csamcs 2023 highlighting the importance and relevance of these fields in tackling contemporary challenges

python makes machine learning easy for beginners and experienced developers with computing power increasing exponentially and costs decreasing at the same time there is no better time to learn machine learning using python machine learning tasks that once required enormous processing power are now possible on desktop machines however machine learning is not for the faint of heart it requires a good foundation in statistics as well as programming knowledge python machine learning will help coders of all levels master one of the most in demand programming skillsets in use today readers will get started by following fundamental topics such as an introduction to machine learning and data science for each learning algorithm readers will use a real life scenario to show how python is used to solve the problem at hand python data science manipulating data and data visualization data cleansing understanding machine learning algorithms supervised learning algorithms unsupervised learning algorithms deploying machine learning models python machine learning is essential reading for students developers or anyone with a keen interest in taking their coding skills to the next level

this volume contains the papers presented at the 2nd international conference entitled emerging technologies in ndt which was held in athens greece may 24 26 1999 this work covers frequently used non destructive testing methods and introduces innovative ideas in the field the title also focuses on visual and optical inspection acoustic emission and ultrasonics as well as a range of other closely related topics more than 50 papers were presented at the conferecne by invited

and distinguished researchers from all over the world this volume forms a valuable record of important contributions to the relevant literature it contains not only the most up to date technology developments but provides also information regarding emerging ndt techniques technologies and their potential applications in the field the book covers frequently used ndt methods and introduces new and innovative ideas focussing on visual and optical inspection acoustic emission ultrasonics nonlinear ultrasonics infrared methods x ray radiography special techniques material characterisation ndt of civil engineering structures inspection of pipes and reliability and validation this volume will be a great boon to engineers researchers quality control managers as well as teachers and graduate students in the field

the study examines the predictability during the extratropical transition et of tropical cyclones using the thorpex interactive grand global ensemble tigge a multimodel ensemble prediction system eps it is shown that tigge exhibits more possible development scenarios than a single eps by analysing the eddy kinetic energy budget of forecast scenarios for two et cases extracted from an eps the impact of the transitioning tropical cyclones on the midlatitude flow is studied in detail

this is the first comprehensive book to cover novell s hot new clustering and storage area network solutions a security collaboration and 100 high availability must for any business the book is a modular comprehensive look at the design of san s and clusters also included are solutions supported by ncs ncs and san features functions implementation and troubleshooting and configuration within the san and cluster the authors have taken a unique modular approach in the book so in cases where perhaps san s are being implemented in a mixed network and microsoft windows 2000 operating system environment to share an oracle database
