image motion processing is important to machine vision systems because it can lead to the recovery of 3d structure and motion author amar mitche offers a comprehensive mathematical treatment of this key subject in visual systems research mitche examines the interpretation of point correspondences as well as the interpretation of straight line correspondences and optical flow in addition the author considers interpretation by knowledge based systems and presents the relevant mathematical basis for 3d interpretation

this book presents a unified view of image motion analysis under the variational framework variational methods rooted in physics and mechanics but appearing in many other domains such as statistics control and computer vision address a problem from an optimization standpoint i e they formulate it as the optimization of an objective function or functional the methods of image motion analysis described in this book use the calculus of variations to minimize or maximize an objective functional which transcribes all of the constraints that characterize the desired motion variables the book addresses the four core subjects of motion analysis motion estimation detection tracking and three dimensional interpretation each topic is covered in a dedicated chapter the presentation is prefaced by an introductory chapter which discusses the purpose of motion analysis further a chapter is included which gives the basic tools and formulae related to curvature euler lagrange equations unconstrained descent optimization and level sets that the variational image motion processing methods use repeatedly in the book

the advances in the technology and methodology for human movement capture and analysis over the last decade have been remarkable besides acknowledged approaches for kinematic dynamic and electromyographic emg analysis carried out in the laboratory more recently developed devices such as wearables inertial measurement units ambient sensors and cameras or depth sensors have been adopted on a wide scale furthermore computational intelligence ci methods such as artificial neural networks have recently emerged as promising tools for the development and application of intelligent systems in motion analysis thus the synergy of classic instrumentation and novel smart devices and techniques has created unique capabilities in the continuous monitoring of motor behaviors in different fields such as clinics sports and ergonomics however real time sensing signal processing human activity recognition and characterization and interpretation of motion metrics and behaviors from sensor data still representing a challenging problem not only in laboratories but also at home and in the community this book addresses open research issues related to the improvement of classic approaches and the development of novel technologies and techniques in the domain of motion analysis in all the various fields of application
