this book is a treatise on empirical microeconomics it describes the econometric theory of qualitative choice models and the empirical practice of modeling consumer demand for a heterogeneous commodity housing accordingly the book has two parts the first part gives a self contained survey of discrete choice models with emphasis on nested and related multinomial logit models the second part concentrates on three substantive questions about housing demand and how they can be answered using discrete choice models why combine these two distinct parts in one book it is the interaction between theory and application in empirical microeconomics on which we focus in this book

hence emphasis in the methodological part is on practicability and emphasis in the applied part is on the usage of the proper econometric specifications econometrics means measuring economic phenomena because nature ironically in the case of economics this is most often the government rarely provides us with well defined economic experiments measurement of economic phenomena usually requires an elaborate statistical apparatus that is able to separate concurrent and confounding phenomena discrete choice models have proved to be a very convenient apparatus to study the complex issues in housing demand we present models techniques and statistical problems of discrete choice in the first and methodological part of the book written in conventional textbook style
