Modeling mathematical ideas combining current research and practical strategies to build teachers and students' strategic competence in problem solving. This must-have book supports teachers in understanding learning progressions that addresses conceptual guiding posts as well as students' common misconceptions in investigating and discussing important mathematical ideas related to number sense, computational fluency, algebraic thinking, and proportional reasoning. In each chapter, the authors open with a rich real-world mathematical problem and present classroom strategies such as visible thinking strategies, technology integration, and other related problems to develop students' strategic competence in modeling mathematical ideas.

This book is intended as a teacher's manual and as an independent study handbook for students and mathematical competitors based on a traditional teaching philosophy and a non-traditional writing approach. The stair-step method: this book consists of new problems with solutions created by the authors. The main idea of this approach is to start from relatively easy problems and step by step increase the level of difficulty toward effectively maximizing students' learning potential. In addition to providing solutions, a separate table of answers is also given at the end of the book. A broad view of mathematics is covered well beyond the typical elementary level by providing more in-depth treatment of geometry and trigonometry, number theory, algebra, calculus, and combinatorics.
