this book had its beginning in 1967 when shirley g driscoll and kurt benirschke wrote in english the volume on placental pathology for the henke lubarsch the noted german handbook of pathology there seemed to be a need for wider distribution of the text and it was reprinted by springer verlag new york essentially the only book available devoted just to the human placenta dr benirschke authored 5 subsequent editions in collaboration with peter kaufmann rebecca baergen and graham burton in 1990 2nd edition 1995 3rd edition 2000 4th edition 2006 5th edition and 2012 6th edition in the early editions the most important material was in a larger font than the extensive review of exceptions and the discussion in the literature since 1967 many other shorter placenta books have been published in english french and german none of these have included the breadth of discussion or the voluminous references which includes details of many historic articles not readily available interest in the placenta has wildly expanded over the intervening 50 years with the vast majority of pathologists obstetricians and pediatricians recognizing its value in addition there are now quite a few new journals societies and meetings devoted to the placenta in both clinical and research areas the interest extends into areas of study well beyond the realm of anatomic pathology the 7th edition will of necessity differ from the prior editions which dr benirschke wrote largely himself at first and later with the help of the above noted co authors it will now be an international multi authored book with nearly 40 contributors revising one or more chapters the explosion of new information as necessitating some reordering of chapters and adding completely new chapters including chapters 31 and 32 innovations in placental pathology and imaging in placental pathology dr burton s section has been extensively edited as well the editors gave the new authors considerable latitude in how to write the new and or edited chapters many of the revised chapters retain much of dr benirschke s anecdotal information as well as the voluminous references others are more modern in their approach all contain substantial new references and current information it is our hope that benirschke s pathology of the
