leading innovative thinkers to consider how they could contribute to a discussion of understanding human behavior their perspectives differ in approach and focus but they all confirm the great complexity of the topic and they show that science has hardly scratched its surface the eight chapters of this volume are dominated by considerations of how the behavior of humans began and developed in the distant past during the evolution of early humans in human sociology the term behavior refers to the range of physical action reaction and observable emotion associated with individuals today as well as human society as a whole but this describes only effects or symptoms of a condition pertaining to today without considering how it came about i e its original causes this is examined in several chapters of this book together with apparent historical trajectories of human behavior in an attempt to explore its etiology other contributions investigate more specific aspects of human behavior including those recorded in history and even in modern times in summary this volume provides a well rounded investigation into current cutting edge understanding of the origins and nature of human behavior

the papers comprising this second volume of human behavior and the environment represent as do their predecessors a cross section of current work in the broad area of problems dealing with interrelationships between the physical environment and human behavior at both the individual and the aggregate levels considering the two volumes as a unit we have included papers covering a broad spectrum of problems ranging from the theoretical to the applied and from the disciplinary based to the interdisciplinary and professional approximately half of the papers are written by psychologists with the remainder coming in part from such other disciplines as sociology geography and from such diverse applied and professional fields as natural recreation landscape architecture urban planning and operations research the volumes thus provide an overview of work on current topical problems yet as the field is developing specialization is inevitably increasing apace and the editors as well as the publisher have become convinced of the desirability for future volumes in this series to be organized along topical lines with successive volumes devoted to different aspects of this rather sprawling field thus volume 3 currently in the planning stage will be devoted exclusively to the interaction of children with the physical environment considered from diverse viewpoints again including authors from diverse fields of specialization
