laboratory manual for principles of general chemistry 11th edition covers two semesters of a general chemistry laboratory program the material focuses on the lab experiences that reinforce the concepts that not all experimental conclusions are the same and depend on identifying an appropriate experimental procedure selecting the proper apparatus employing the proper techniques systematically analyzing and interpreting the data and minimizing inherent variables as a result of good data a scientific and analytical conclusion is made which may or may not be right but is certainly consistent with the data experiments write textbooks textbooks don't write experiments a student's scientific literacy grows when experiences and observations associated with the scientific method are encountered further experimentation provides additional cause effect observations leading to an even better understanding of the experiment the 11th edition's experiments are informative and challenging while offering a solid foundation for technique safety and experimental procedure the reporting and analysis of the data and the pre and post lab questions focus on the intuitiveness of the experiment the experiments may accompany any general chemistry textbook and are compiled at the beginning of each curricular unit an additional notes column is included in each experiment's report sheet to provide a space for recording observations and data during the experiment continued emphasis on handling data is supported by the data analysis section

this special issue of corrosion engineering science and technology is dedicated to the study of corrosion of objects from historical sites the issue contains contributions from the 2009 eurocorr session on corrosion of archaeological and heritage artefacts organised by the european federation of corrosion's working party and commissioned articles on other key issues the objective is to give the reader a broad understanding of corrosion of ancient materials for the most part metal but also glass articles shed light on a range of analytical approaches related to the study of the complex systems that make up historical artifacts in order to arrive at an understanding of the nanometric organisation of rust layers and interphases such studies must be approached on a macroscopic scale techniques used include macrophotography synchrotron radiation and transmission electron microscopy

tem that ensure results that are both exhaustive and representative of particular observations this issue demonstrates the wealth of approaches possible in the study of the corrosion of ancient materials

energy and mass in relativity theory presents about 30 pedagogical papers published by the author over the last 20 years they deal with concepts central to relativity theory energy E rest energy E_0 momentum p mass m velocity v of particles of matter including massless photons for which $v = c$ other related subjects are also discussed according to einstein's equation $E_0 = mc^2$ a massive particle at rest contains rest energy which is partly liberated in the nuclear reactions in the stars and the sun as well as in nuclear reactors and bombs on the earth the mass entering einstein's equation does not depend on velocity of a body this concept of mass is used in the physics of elementary particles and is gradually prevailing in the modern physics textbooks this is the first book in which einstein's equation is explicitly compared with its popular though not correct counterpart $E = mc^2$ according to which mass increases with velocity the book will be of interest to researchers in theoretical atomic and nuclear physics to historians of science as well as to students and teachers interested in relativity theory
