politics society and the media is the first comprehensive political sociology of the media to be published in canada paul nesbitt larking draws upon a range of disciplines including cultural and media studies political economy social theory and political science to provide an analysis of the relationship between power and representation in canada the framework for the book presents a model of the mutual interaction between politics and the media attention is focused in the early chapters on how cultural ideological economic and

governmental forces shape and condition the production of media in Canada. Chapters on the work of Innis, Grant McLuhan, and their postmodern successors place the evolution of McLuhan's theoretical argument that the medium is the message at the heart of the book. Canadian identity and how to understand Canadian media politically is the subject of a chapter on textual analysis. Two extensive chapters follow on the media's influence and effects on politics. In addition to standard topics on politics and the media, this new edition offers much more: an examination of the media on the politics of gender and Aboriginal peoples, the micro-politics of the media workplace, and an exploration of important media-related considerations. Throughout, reference is made to relevant and compelling issues placed within the context of media theory.

Learn how to navigate the ins and outs of the law and social media. How should you respond to a request to remove copyrighted materials from a Facebook page if you create a Twitter username at work? Who owns the username when you change jobs? Can you be sued for libel if someone thinks your posts are defamatory? If you've ever asked yourself these kinds of questions, this pioneering legal handbook is for you. Despite the enormous growth in social media usage by businesses and influencers, very little has been written about the laws affecting their activities. In this new edition of the legal guide to social media, Kimberly A. Houser, law professor and tech attorney, explains the potential pitfalls and how to avoid them, including what social media influencers could have done to protect themselves from the lawsuits resulting from the Fyre Festival debacle. Easy to understand, comprehensive, and up to date, the legal guide to social media, second edition, provides the latest information on case law and statutes. It covers everything from privacy laws to the legal considerations in setting up a page or website, as well as new governmental regulations. This plain English legal companion offers examples of and solutions to the kinds of situations you can expect to encounter when posting online content, whether for yourself, your own business, or on behalf of your client's business. You'll learn how to avoid liability for defamation and third-party posts, how to protect your own content, the unique legal issues surrounding social media in the workplace, and much, much more. The new edition covers new state regulations on privacy, data security, and advertising; how to avoid intellectual property infringement actions; and the newer legal risks for influencers.

In recent years, online social networking has revolutionized interpersonal communication. The newer research on language analysis in social media has been increasingly focusing on the latter's impact on our daily lives, both on a personal and a professional level. Natural language processing (NLP) is one of the most promising avenues for social media data processing. It is a scientific challenge to develop powerful methods and algorithms which extract relevant information from a large volume of data coming from multiple sources and languages in various formats or in free form. We discuss the challenges in analyzing social media texts in contrast with traditional documents. Research methods in information extraction, automatic categorization and clustering, automatic summarization and indexing, and statistical machine translation need to be adapted to a new kind of data. This book reviews the current research on NLP tools and methods for processing the non-traditional information from social media data that is available in large amounts (big data) and shows how innovative NLP approaches can integrate appropriate linguistic information in various fields such as social media monitoring, healthcare, business intelligence, industry marketing, and security and defence. We review the existing evaluation metrics for NLP and social media applications and the new efforts in evaluation campaigns or shared tasks on new datasets collected from social media. Such tasks are organized by the Association for Computational Linguistics such as Semeval tasks or by the National Institute of Standards and Technology via
