the rat is probably the most widely used experimental system in neurobiology several  
anatomical atlases of the rat s nervous system already exist but this atlas is unique in that it  
maps the distribution of all neuroactive substances transmitters growth factors modulators  
hormones and peptides and their receptors by brain region it begins with a useful overview  
of neurotransmission mechanisms the entire brain is then presented in highly visual three  
color sections the atlas covers the synthesis distribution and functions of each class of  
substances in intricate detail the authors follow this with an analysis of the structure  
subtypes and distribution of receptors the volume will be an invaluable reference work for  
all researchers in neuropharmacology neurobiology and neuropathology
