The Origins of Capitalist Civilization

Early Trade and Mercantilism

The roots of capitalist civilization can be traced back to ancient civilizations such as Mesopotamia, Egypt, Greece, and Rome, where trade and commerce laid the groundwork for economic exchange. However, the more recognizable form of capitalism began to emerge during the late Middle Ages and the Renaissance period, driven by:

- Merchant trading:** The rise of merchant classes engaged in cross-border trade, especially in commodities like spices, silk, and precious metals.
- Banking innovations:** The development of banking institutions and financial instruments facilitated larger-scale commerce.
- Mercantilism:** This economic policy emphasized state control over trade, accumulation of wealth through exports, and colonial expansion, laying the groundwork for capitalist enterprise.

The Commercial Revolution and Early Capitalism

Between the 15th and 17th centuries, Europe experienced the Commercial Revolution, which marked a significant shift toward capitalist practices:

- The establishment of joint-stock companies like the Dutch East India Company.
- Expansion of global trade networks.
- Increased urbanization and the rise of market towns.
- The development of banking and credit systems.

This period set the stage for the Industrial Revolution by fostering entrepreneurial spirit, financial innovation, and the accumulation of capital.

- The rise of the bourgeoisie and a new middle class.
- Changes in labor structures, including the emergence of wage labor.
- Political movements advocating for workers' rights and economic reform.

Capitalist Civilization and Cultural Development

Economic Values and Cultural Norms

As capitalism grew, it influenced cultural attitudes and societal values:

--- **Understanding Historical Capitalism: Origins and Evolution**

The Roots of Capitalist Civilization Historical capitalism is not a static or monolithic entity; rather, it is a dynamic process that has evolved over centuries. Its origins can be traced back to several intertwined developments in medieval Europe, the Renaissance, and early modern periods.

- **Medieval Precursors:** During the Middle Ages, Europe experienced the rise of trade fairs, merchant guilds, and proto-banking institutions. While feudalism dominated social organization, merchant capitalism began to take shape, facilitating long-distance trade and laying the groundwork for commercial expansion.
- **The Commercial Revolution (15th-17th Century):** The Age of Exploration, marked by voyages of Columbus, Vasco da Gama, and others, catalyzed a surge in global trade. This period saw the rise of joint-stock companies, colonial enterprises, and the accumulation of capital on an unprecedented scale, setting the stage for capitalist enterprise beyond local markets.
- **Industrial Revolution (18th-19th Century):** The defining event transforming capitalism into a dominant civilization was the Industrial Revolution. Beginning in Britain, it introduced mechanized manufacturing, technological innovations, and the factory system. This era dramatically increased productivity and shifted economic power from landowners to industrial capitalists.
- **Financial and Corporate Expansion:** The development of stock markets, banking institutions, and large-scale corporations further institutionalized capitalism, enabling capital accumulation, investment, and the expansion of markets.

here richard lachmann offers a new answer to an old question why did capitalism develop in some parts of early modern europe but not in others finding neither a single cause nor an essentialist unfolding of a state or capitalist system lachmann describes the highly contingent development of various polities and economies he identifies in particular conflict among feudal elites landlords clerics kings and officeholders as the dynamic which perpetuated manorial economies in some places while propelling elites elsewhere to transform the basis of their control over land and labor comparing regions and cities within and across england france italy spain and the netherlands from the twelfth through eighteenth centuries lachmann breaks new ground by showing step by step how the new social relations and political institutions of early modern europe developed he demonstrates in detail how feudal elites were pushed toward capitalism as they sought to protect their privileges from rivals in the aftermath of the reformation capitalists in spite of themselves is a compelling narrative of how elites and other classes made and responded to political and religious revolutions while gradually creating the nation states and capitalist markets which still constrain our behavior and order our world it will prove invaluable for anyone wishing to understanding the economic and social history of early modern europe capitalists in spite of themselves was the winner of the 2003 distinguished scholarly publication award of the american sociology association

connects the marxist construct of capitalism to systems of community in this book michael lebowitz deepens the arguments he made in his award winning beyond capital karl marx in capital focused on capital and the capitalist class that is its embodiment it is the endless accumulation of capital its causes and consequences that are central to marx s analysis in taking this approach marx tended to obscure not only the centrality of capital s immanent drive and constant tendency to divide the working class but also the political economy of the working class social production controlled by social foresight in between capitalism and community lebowitz demonstrates that capitalism contains within itself elements of a different society one of community whereas marx s intellectual construct of capitalism treats it as an organic system that reproduces its premises of capital and wage labor including a working class that looks upon the requirements of capital as self evident natural laws lebowitz argues that the struggle of workers in common and activities based upon solidarity point in the direction of the organic system of community an alternative system that produces its own premises communality and recognition of the needs of others if we are to escape the ultimate barbarism portended by the existing crisis of the earth system the subordination of the system of capitalism by that of community is essential since the interregnum in which capitalism and community coexist is marked by the interpenetration and mutual deformation of both sides within this whole however the path to community cannot emerge spontaneously but requires a revolutionary party that stresses the development of the capacities of people through their protagonism

myths of capitalism shows that tenets of the capitalist belief system the sanctity of private property the social benefits of profit etc do not hold up under empirical scrutiny it also addresses seminal issues such as enforced scarcity resulting from technological advances

a historical essay on old regimes and modern states in this lively and wide ranging book ellen meiksins wood argues that what is supposed to have epitomized bourgeois modernity especially the emergence of a modern state and political culture in continental europe signaled the persistence of pre capitalist social property relations conversely the absence of a modern state and political discourse in england testified to the presence of a well developed capitalism the fundamental flaws in the british economy are not just the symptoms of arrested development but the contradictions of the capitalist system itself britain today wood maintains is the most thoroughly capitalist culture in europe

in 1974 maurice zeitlin published a seminal article in the american journal of sociology criticizing managerial theory and evidence which ended one era in the analysis of the large corporation s ownership and control and began a new one he called for research on the capitalist class that would reveal its inner structure particularly the interaction of family ties property and business leadership in the large corporation but despite the subsequent blossoming of studies of intercorporate and class power no one else has yet done the systematic empirical analysis he outlined this work is thus the first to explore the full panoply of intraclass relations interorganizational kinship economic and political within an actually existing dominant class theoretically sensitive methodologically precise and historically grounded it aims to fill in the blank spots in our knowledge about how economic classes become social classes and how the latter in turn connect with other social forms this work is a sustained empirical analysis of chile s dominant class but it does more than reveal that class s specific internal structure it also provides a coherent theory of the inner relations constituting any dominant class in a highly concentrated capitalist economy a methodological paradigm and an exemplary body of findings which can closely guide the study of other dominant classes especially in the advanced societies of the west originally published in 1988 the princeton legacy library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of princeton university press these editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905

this unique volume presents a theory of capitalist collective action and a case study of the pre world war ii american coal industry to which the theory is applied the author examines the irony of capitalist firms that do not want to compete with each other but often cannot avoid doing so he then explains under what conditions businesses would be able to organize their competition and identifies the economic and political factors that facilitate or inhibit this organization the case study not only illustrates the theory but demonstrates how the competitive relations of capitalist firms are critically important determinants of their political behavior

today there is widespread recognition that capitalism is the socioeconomic system of choice this volume perhaps the best single volume assessment of this economic model and how it emerged contributes to the understanding of the historic role of capitalism after reviewing the gestation of the system it explains the emergence of full blown capitalism in the eighteenth century taking it into the nineteenth and its link to the industrial revolution the primary focus however is on the twentieth century in which capitalism faced and met challenges due to world wars and depression with the aid of interventionist policies notably keynesian economics and the welfare state but the failure of the postwar policy consensus to cope with the twin problems of inflation and slow economic growth led to a resurgence of greater reliance on unalloyed capitalism capitalist values so permeate modern culture in america that to question them seems like heresy in 1989 the economist robert l heilbroner who had been a perceptive student of capitalism and socialism for decades proclaimed the triumph of capitalism arguing that the contest of economic systems was over and the victory of capitalism was unambiguous fifteen years later c fred bergsten director of the institute for international economics reinforced this view the u s model of capitalism and globalization dominates thinking around the world writer russell baker dismayed by perceived degrading effects of market obsessed management on journalism observed that belief in the virtue of maximized profits has acquired something like sanctity in american life an appreciation of economic and social history and the accompanying clash of ideas is helpful in providing a context in which ongoing challenges may be evaluated it is important to know that what is understood to be capitalism has changed significantly over time the purpose of this book is to provide such context written by an economist but accessible to a general public this book is a wide ranging assessment of today s dominant economic system and its historical development

capitalism socialism and democracy remains one of the greatest works of social theory written this century when it first appeared the new english weekly predicted that for the next five to ten years it will certainly remain a work with which no one who professes any degree of information on sociology or economics can afford to be unacquainted fifty years on this prediction seems a little understated

capitalism s biggest problem is the executive in pinstripes who extols the virtues of competitive markets with every breath while attempting to extinguish them with every action saving capitalism from the capitalists is a groundbreaking book that will radically change our understanding of the capitalist system particularly the role of financial markets they are the catalyst for inspiring human ingenuity and spreading prosperity the perception of many especially in the wake of never ending corporate scandals is that financial markets are parasitic institutions that feed off the blood sweat and tears of the rest of us the reality is far different vibrant financial markets threaten the sclerotic corporate establishment and increase corporate mobility and opportunity they are the reason why entrepreneurship flourishes and companies like the home depot and wal mart mere fly specks a quarter of a century ago have surged as they have they mean personal freedom and economic development for more people throughout history and in most of the world today the record is one of financial oppression elites restrict access to capital and severely limit not only general economic development but that of individuals as well open borders help check the political and economic elites and preserve competitive markets the greatest danger of the antiglobalization movement is that it will keep the rich rich and the poor poor globalization forces countries to do what is necessary to make their economies productive

not what is best for incumbent elites open borders limit the ability of domestic politics to close down competition and to retard financial and economic growth markets are especially susceptible in economic downturns when the establishment can exploit public anger to restrict competition and access to capital while markets must be free to practice creative destruction rajan and zingales demonstrate the political and economic importance of a sustainable distribution of wealth and a baseline safety net capitalism needs a heart for its own good there are no iron laws of economics that condemn countries like bangladesh to perpetual poverty or the united states to perpetual prosperity the early years of the twentieth century saw vibrant open financial markets that were creating widespread prosperity then came the great reversal during the great depression it can and will happen again unless there is greater understanding of what markets do who benefits and who really wants to either limit them or shut them down saving capitalism from the capitalists breaks free of traditional ideological arguments of the right and left and points to a new way of understanding and spreading the extraordinary wealth generating capabilities of capitalism

how valid is the marxian theory of imperialism this book traces the historical development of the theory of imperialism the internationalisation of capital and theories of capitalist nation state formation
