the book aims to further the debate on the impacts of fisheries policies in the indian ocean region in order to facilitate a new regional policy direction a key argument of the volume is that ecologically sustainable and socially just development and management of indian ocean fisheries require a paradigm shift in the perceptions and policies of major stakeholders a central policy challenge is to identify a collective regional interest for fisheries and accordingly

the development of integrated management policies that link ecology and society and which incorporate individuals communities agencies states and regimes into a holistic cooperative endeavour successful ocean governance therefore requires greater inter state and inter agency consultation and cooperation an improvement in linking national initiatives to local action increased participation of local government and local communities and the enhancement of local capability in order to achieve this overall goal requires either the enhancement of existing regional institutions or the creation of a new regional body institute of southeast asian studies singapore and indian ocean research group iorg co publication iseas has worldwide distribution rights

the waters of the indo pacific were at the centre of the global expansion of marine capture fisheries in the twentieth century yet surprisingly little has been written about this subject from a historical perspective this book the first major study of the history of fishing in asia and oceania presents the case studies completed through the history of marine animal populations hmap initiative it examines the marine environmental history and historical marine ecology of the indo pacific during a period that witnessed the dramatic escalation of industrial fishing in these seas

management of freshwater fisheries deals with a class of aquatic animals fish with particular reference to a human activity fishing that can be a means of livelihood or a pastime the tested data are presented in a clear and well balanced manner often with the help of tables and illustrated with many sketches and photographs a glossary and an index make this book a useful practical guide this book will be useful to professionals involved in the biology management and protection of the aquatic medium hydrobiologists aquaculturists fish farmers technicians and fishing wardens

the fisheries of north america is designed to be a comprehensive user friendly guide to the major commercial species of fish and shellfish landed in the us and canada as well as many recreational species the book includes illustrations and keys to identifying fish by their appropriate market names common names and scientific names and for distinguishing these species from other species they can be easily mistaken for it is not only a definitive guide to north america s commercial fisheries it is also easily accessible and reliable for a range of users from general fishers to professional researchers the book focuses on species that account for more than 99 percent of the total value of marine and freshwater finfish and shellfish landed in the us and canada eighty different species have been chosen to represent major seafood groups under approved market names e g anchovy cod grouper hake clam crab shrimp etc as defined in the publication the seafood list using these chosen species the book sheds light on other species that comprise the same or related market name or common name designations in total several hundred species are introduced and discussed almost all the commercially significant species landed in the united states and canada species are identified and described under key headings for example name recognition physical identification and differentiation habitat range fishing methods landing trends commercial uses and forms spawning behaviour and life cycle where appropriate the book also identifies real

or potential threats to a fishery conservation initiatives aquaculture initiatives impact of recreational fishing government regulations or advisories processing methods under utilized species and unique species characteristics conflicts and duplications in species nomenclature are still rife particularly in the use of common names this hampers the integrity of both economic and scientific research efforts as well as the transparency of commercial transactions like language itself existing or local custom often prevails over standard conventions and some fish shellfish nomenclature issues will never be entirely resolved to everyone's satisfaction for example it is unlikely that lake trout or brook trout will ever be widely known or marketed as char charr in fishbase even though this may be a more appropriate market name many other sources of nomenclature confusion abound rockfish are legally marketed as snapper on the west coast while greenland turbot is often marketed as halibut in boston two different species atlantic pollock and walleye pollock are often reported together as just pollock blackback flounder and gray sole are designated common names but are more often reported under different common names bass butterfly bluefish hake seatrout perch pompano porgy snapper and whiting are all examples where common names or market names are often used incorrectly some species of shellfish e.g. clams and whelks have no generally recognised common name at all the book tackles these identification issues head on to accomplish cradle to grave species identification the author's approach was to match where possible the preferred market names and common names of fish shellfish species as identified in the seafood list to the most recently designated scientific names of the species as verified in the integrated taxonomic information system itis in most cases the seafood list's species scientific name was the same as the itis name however where there was a difference the itis designation was used the us sponsored itis database for scientific names as with the the seafood list is based on north american wide input hence the species identification terminology used in this book is compatible with the most recently approved usage in north america but may not equate with other conventions for example species of finfish were cross referenced with the fishbase database and many differences in nomenclature particularly in preferred common names were noted and included here the book makes a serious effort at clarifying issues of species identity so that the reader can quickly appreciate and connect issues of larger importance market information is often deficient without clear identification and understanding of the species being discussed similarly scientific information on species often lacks important perspectives on economic impact and market presentation the integrated approach taken in this book facilitates a quick and comprehensive if not detailed understanding of the state of the major commercial fisheries in the united states and canada this effort is aided by almost 100 illustrations of key species and a comprehensive index that is organized to reflect market names common names scientific names and common aliases multi lingual names are also included in the text an introductory section provides a perspective on the historical impact of the fisheries in the early settlement of north america and an overview of the present socio economic impact of the industry this is supplemented with illustrations and information on fishing methods and common terms used to describe fishes physical attributes so the reader can easily follow the text a glossary of the scientific terms used is also included hence the book should prove to be a valuable tool to industry and

government decision makers as well as researchers and educators involved in the north american fisheries an illustrated ms power point presentation of the book can also be made available for classroom or seminar use 180 statistical tables100 illustrationsfor additional information and title page see [marketresearchassociates.com/publications.htm](http://marketresearchassociates.com/publications.htm)

this document brings together the twenty eight papers presented at the expert consultation on inland fishery enhancements dhaka bangladesh 7 11 april 1997 the expert consultation was jointly organized by fao and the department for international development of the united kingdom and hosted by the government of bangladesh the major objective of the expert consultation was to promote better understanding of how the various factors involved in implementing inland fisheries enhancements programmes must fir together to achieve success other papers broadly covered social and economic benefits and their distribution institutions and self and participatory management country reviews dealing very broadly with enhancements are also included this technical paper is a companion to the report of the expert consultation on inland fishery enhancements fao fisheries report no 559 that deals with the administrative aspects of the meeting and sets out the conclusions and recommendations of the participants
