excerpt from forty two years of bee keeping in new zealand 1874 1916 some reminiscences he also published about the year 1844 a few simple rules for new zealand beekeepers 1 be anxious to increase your stock at first rather than to take a large quantity of honey 2 get well acquainted with your bees and make them acquainted with you handle them gently and do not blow on them leave them alone when they are cross 3 always in swarming time have a spare hive at hand 4 if you have boxes to pile one on top of the other never disturb the lower box except when after two or three years the combs have grown old and want renewing then late in the autumn when the breeding season is over take the combs away from the lower box instead of the second to take honey 5 take off the cover blow some smoke into the upper box between the bars to drive the bees into the lower box have a table ready with a cloth upon it lift the box on to this and carefully cut out the outside combs stopping directly you come to those which have brood in them return the box with the brood combs undisturbed this may be repeated

as often as you see through the window of the hive that the honeycombs are sealed over 6 after the breeding season is over all the boxes except the lower one may be entirely emptied in situations where as at paihia the bees work through the winter 7 keep a stock book regularly and write down immediately anything curious which is observed signed william chas cotton the above rules were no doubt the best that could be adopted by new zealand beekeepers at that time and the system advocated was at least a great advance on that of the sulphur pit method though quite out of date now rule 7 however concerning an apiary register or note book will always hold good the first new zealand bee manual somewhere in the early part of the second half of the last century a useful little manual with the title how to manage the honey bees in new zealand compiled by an old beekeeper and revised by h j hawkins belvedere nursery and david hay montpellier nursery was published by geo t chapman auckland the practical part of this little work covers some 45 pages and was fully up to date at the time it was published the bar hive not the bar frame hive was the most advanced form of hive then in use from which the honeycombs had to be separated from the sides with a long knife when taking honey barframes as we know them now had not then been invented notwithstanding however all that the rev w cotton and a few others had done to awaken an interest in the most humane system of beekeeping in new zealand the old cruel and wasteful sulphur pit method was generally practised down to the year 1880 when things took a turn for the better although the sulphur pit was still largely in evidence until some eight or nine years ago primitive beekeeping as i have already intimated beekeeping in new zealand for very many years after the introduction of the hive bee speaking generally followed the primitive methods in vogue among the cottager class in britain and other parts of europe at that time common boxes with crossed sticks running through them to support the combs were the common form of hives though a few settlers who had been familiar with and made straw skeps in the old country adopted that style of hive here during the first years of my travelling among our beekeepers as government apiarist i came across several lots of well constructed skeps they were made of twisted straw laced with split supple jack cane and were very neat and cosy looking it grieved the owners very much when they were compelled to do away with them and adopt the more serviceable frame hive a prominent feature of this primitive hive system was the sulphuring of the bees at th

first published in 2000 this comprehensive book represents the first attempt to write a world history of people s use of social bees how bees nests were initially hunted for their honey and wax and later how the bees were kept in purpose made hives evidence survives from early times in the form of artefacts pictures and written records and also human traditions of dealing with bees since 1949 the author has had opportunities to travel in over sixty countries and to see traditional and modern hive beekeeping and also honey collection from nests she learned much that helped her to piece together some of the long history in the different continents

managed honey bees in the us have periodically faced challenges around pests and infectious disease as beekeepers have responded with a range of different management practices they have clashed over what it means to be responsible and the degree of control that is possible or desirable many of these conflicts hinge on the inherently dual nature of the honey bee which is both a livestock animal but also wild in many ways to understand these politics the three papers of this dissertation draw on participant observation interviews observation of beekeeping clubs and workshops a statewide survey and archival research based largely in new york state to save the bees or not to save the bees honey bee health in the anthropocene published in agriculture and human values 2019 this article situates contemporary honey bee health challenges particularly debates over how to manage parasitic mites within the literature on the anthropocene the main objection to numerous small bee keepers biosecurity and the professionalization of beekeeping published in the journal of historical geography 2020 this article describes the origins of the beekeeping institutions that arose in the late nineteenth and early twentieth centuries particularly extension and how they promoted a particular vision of good beekeeping based on biosecurity it details how an envirotechnical regime behind beekeeping promoted norms as a part of the modernization of american agriculture hybridity for health converging learning curves in beekeeping unpublished this paper argues that the idea of hybridity and specifically nature society and wild livestock hybridity can be a useful guide for keeping honey bees healthy and other quandaries of the anthropocene i show how individual beekeepers understandings of honey bees shape how they start to develop the skills to manage parasitic mites in their colonies as beekeepers continue to climb different learning curves their understanding of bees is either reshaped or limits how successful they will be together these papers contribute to theory in scholarship on food systems historical political ecology and literature on biosecurity particularly within geography as well as topically clarifying one of the primary dilemmas over good practices within beekeeping today

a comprehensive manual on all aspects of beekeeping including bee physiology and biology getting started nectar and pollen plants supplementary feeding honey extraction and production bee health and marketing includes illustrations and colour photographs

the honey bee has lived in close association with human beings for millennia tragically however humanity's once intimate connection with this unique creature has been harmed by our increasingly utilitarian and exploitative dealings with the natural world we are now in urgent need of re-establishing a deeper relationship not just for the sake of the bees themselves but for the whole of nature and of course for ourselves lorenzen a true master beekeeper provides numerous insights to enable a more fruitful engagement with the living world offering an enrichment of the knowledge and practice of beekeeping he discusses the origins of the honey bee its relationship to the floral kingdom the digestion of the bee the treatment of bee diseases as well as appropriate beekeeping techniques he also develops subtle spiritual concepts such as the idea of the bee colony as an individuality and group soul providing new depth and wisdom to our understanding of how bees live and work this small book a hidden gem that has never before appeared in english is essential reading for anyone who cares

about the future of the honey bee and the future of humanity
