rock and roll those three words are understood by people in almost every nation on earth they describe a type of music and an attitude that made history and continues to change the musical landscape readers will learn that the music style started out in the united states as a new type of dance music for teenage baby boomers during the mid 1950s by the 1960s the music transformed the cultural and political landscape of much of

the world never before in history has a style of music come along that so quickly and so completely changed the world author stuart kallen traces the history of rock and roll from its early 1950s beginnings through its most significant developments to date

this book has following unique features that distinguish it from other works from the same area 1 investigates the influence of fissure geometry on strength failure and crack evolution behaviour of real rock material 2 analyzes the effect of pre experiment high temperature treatment on fracture mechanical behaviour of rock material with a single fissure or two parallel fissures 3 compares quantitatively simulated results using discrete element modelling and experimental results of fracture mechanical behaviour of rock material with two fissures 4 constructs the relationship between crack evolution processes and acoustic emission distribution of pre fissured rock material under entire deformation and 5 discusses the crack evolution mechanism of pre fissured rock material with respect to different confining pressures this book can become the reference for technicians in the field of geotechnical engineering mining engineering and geology engineering at the same time this book can be regarded as a good reference for scientific researchers carrying out fissured rock mechanics and correlated specialties

geomorphology can be defined simply as the study of landforms landforms are the result of the interaction between what ritter 1978 has called the driving and resisting forces the driving forces or processes are the methods by which energy is exerted on earth materials and include both surface geomorphological or exogenous processes and subsurface geological or endogenous processes the resisting forces are the surface materials with their inherent resistances determined by a complex combination of rock properties stated in these simple terms it would be expected that both sides of the equation be given equal weight in syntheses of landform evolution however this has not been the case until about the 1950s geomorphology was mainly descriptive and concerned with producing time dependent models of landscape evolution although the form of the land was the main focus there was little detailed mention of process and scant attention to the properties of surface materials there were of course exceptions in the late 19th century g k gilbert was stressing the equilibrium between landforms and processes many hydrologists were examining the detailed workings of river systems and drainage basins culminating in the classic paper of horton 1945
