this problem book is based on the exercises and lectures which i have given to undergraduate and graduate students of the faculty of physics university of belgrade over many years nowadays there are a lot of excellent quantum field theory textbooks unfortunately there is a shortage of problem books in this field one of the exceptions being the problem book of cheng and li 7 the overlap between this problem book and 7 is very small since the latter mostly deals with gauge field theory and particle physics textbooks usually contain problems without solutions as in other areas of physics doing more problems in full details improves both understanding and efficiency so i feel that the absence of such a book in quantum field theory is a gap in the literature this was my main motivation for writing this problem book to students you cannot start to do problems without previous studying your lecture notes and textbooks try to solve problems without using solutions they should help you to check your results the level of this problem book corresponds to the textbooks of mandl and shaw 15 greiner and reinhardt 11 and peskin and schroeder 16 each chapter begins with a short introduction aimed to define notation the first chapter is devoted to the lorentz and poincaré symmetries chapters 2 3 and 4 deal with the relativistic quantum mechanics with a special emphasis on the dirac equation in chapter 5 we present problems related to the euler lagrange equations and the noether theorem
