the monograph is devoted to the relatively new and fast developing field of cluster physics it  
is based on talks given at the cluster workshops which were held in pushchino in 1995 and  
1996 the reports focus not only on the fundamental physical properties of clusters such as  
their geometric and electronic structure as well as optical thermal and magnetic properties but  
also on a broad spectrum of their potential applications these include nucleation and growth  
of small particles fabrication of new materials with predefined properties cluster assembled  
and nanostructures some aspects of simulations and calculations of small particles and clusters  
are also discussed we hope that our monograph will be of interest to a broad range of  
readers who will be able to sense the excitement of the talks

following the pioneering discovery of alpha clustering and of molecular resonances the field of  
nuclear clustering is today one of those domains of heavy ion nuclear physics that faces the  
greatest challenges yet also contains the greatest opportunities after many summer schools  
and workshops in particular over the last decade the community of nuclear molecular  
physicists has decided to collaborate in producing a comprehensive collection of lectures and  
tutorial reviews covering the field this second volume follows the successful lect notes phys  
818 vol 1 and comprises six extensive lectures covering the following topics microscopic  
cluster models neutron halo and break up reactions break up reaction models for two and  
three cluster projectiles clustering effects within the di nuclear model nuclear alpha particle  
condensates clusters in nuclei experimental perspectives by promoting new ideas and

developments while retaining a pedagogical style of presentation throughout these lectures will serve as both a reference and an advanced teaching manual for future courses and schools in the fields of nuclear physics and nuclear astrophysics

various theories have been put forward as to why business and industry develops in clusters and despite good work being carried out on path dependence and dynamics this is still very much an emerging topic in the social sciences to date no overarching theoretical framework has been developed to show how clusters evolve unfolding cluster evolution aims to address this gap by presenting theoretical and empirical research on the geography of innovation this contributed volume seeks to shed light on the understanding of clusters and its dynamic evolution the book provides evidence to suggest that traditional perspectives from evolutionary economic geography need to be wedded to management thinking in order to reach this point bringing together thinking from a range of disciplines and countries across europe this book explores a wide range of topics from the capability approach to network dynamics to multinational corporations to firm entry and exit and social capital this book will be of interest to policy makers and students of urban studies economic geography and planning and development
