as agricultural methods become more intensive and as industrial operations expand the number of pesticides entering bodies of water increases demanding effective removal strategies and forward thinking approaches this new volume addresses this important challenge by investigating sophisticated removal technologies and developing pesticide management trends chapters cover common pesticides detected in wastewater from agricultural and nonagricultural sources readily available nanoparticles and nanomaterials that successfully remove hazardous compounds from wastewater the use of new electrochemical technologies and perovskite oxide semiconductors to remove pesticides the varieties of biopesticides and their advantages over synthetic pesticides the construction of water treatment facilities

applications of entomopathogenic organisms in viticulture and more

bringing together the research of 62 distinguished scientists in one volume environmental contamination health risks and ecological restoration offers a comprehensive view of the remediation of contaminated land a one stop resource it covers historical and emerging contaminants the issues of bioavailability of chemicals and their associated hu
