delivers the anatomy and physiology content found in a traditional lab book but with a clinical and case based approach this volume of lab activities will not only lead to investigations and critical thinking but will also integrate lecture material in a case study scenario

human anatomy and physiology is a complex yet fascinating subject and is perhaps one of the most personal subjects a student will encounter during his or her education it is also a subject that can create concern for students because of the sheer volume of material and the misconception that it is all about memorization the study of human anatomy and physiology really comes to life in the anatomy and physiology laboratory where students get hands on experience with human cadavers and bones classroom models preserved and fresh animal organs histology slides of human tissues and explore the process of scientific discovery through physiology experimentation yet most students are at a loss regarding how to

approach the anatomy and physiology laboratory for example students are often given numerous lists of structures to identify histology slides to view and wet labs to conduct but are given comparatively little direction regarding how to recognize structures or how to relate what they encounter in the laboratory to the material presented in the lecture in addition most laboratory manuals on the market contain little more than material repeated from anatomy and physiology textbooks which provides no real benefit to a student this laboratory manual takes a very focused approach to the laboratory experience and provides students with tools to make the subject matter more relevant to their own bodies and to the world around them rather than providing a recap of material from classroom lectures and the main textbook for the course this laboratory manual is much more of an interactive workbook for students a how to guide to learning human anatomy and physiology through touch dissection observation experimentation and critical thinking exercises students are guided to formulate a hypothesis about each experiment before beginning physiology exercises diagrams direct students in how to perform experiments and don't just show the end results the text is written in a friendly conversational tone to put students at ease as they discover organize and understand the material presented in each chapter

the human skeletal anatomy laboratory manual and workbook has been designed to help students who are enrolled in courses dedicated to this topic it is the product of many years of designing and instructing a human skeletal biology course for undergraduate students the key to this manual is flexibility instructors may utilize as much or as little of the manual as they see fit it is largely based on the regional approach to anatomy however the first section of the manual begins with a survey of the microscopic and macroscopic structure of bone after grounding the student in the basics of bone structure the manual then turns to the gross morphological anatomy of skeletal elements the axial skeleton is dealt with first then the appendicular skeleton the manual is designed to cover material in an incremental fashion specifically the anatomy of less complicated bones such as the ribs sternum and hyoid are discussed prior to other axial

bones in order to acquaint students with how to handle real bone material in the laboratory each successive laboratory session demands more from the student in both the level of understanding and expectations in assigned laboratory exercises each laboratory session begins with an introduction in order to familiarize the student with the areas to be studied subsequently the laboratory session has a stated purpose with clear instructions of expectations and learning objectives important terms are clearly indicated in boxes to stress to students that these must be understood this is then followed by a clear laboratory procedure for the student to follow this usually involves the identification of particular features of assigning specific tasks as identified in the various exercises finally as a means of stressing the applicability of what has been learned in the laboratory exercise the student will be requested to generate an evaluation of some aspect of the anatomy such as using a method for determining age at death from assigned specimens the student is then required to interpret this information and produce for the next class or session a laboratory research report guidelines for these reports are contained within this manual diagrams photographs have been provided for students to label these diagrams are meant to be a study guide instructors may wish to add anatomical features or de emphasize certain features accordingly
