heavily illustrated with 900 pictures of actual well control sites common well control hazards identification and countermeasures provides a visual representation of 177 common well control hazards and how to prevent or counteract them the perfect companion for any engineer who needs to develop and apply their skill more efficiently this plain language guide covers common well control equipment such as bop control system bop manifold kill manifold drilling fluid recovery pipes ibop tools liquid gas separator and fire explosion h2s prevention with this manual in hand new hires not only learn about the inherent hazards which await them out in the field but also gain expert advice for deploying the necessary countermeasures which will lead to effective incident free field operations simply describes operational equipment and procedures explains 177 kinds of potential hazards and countermeasure identifies common hazards and their countermeasures

safety and reliability of complex engineered systems contains the proceedings of the 25th european safety and reliability conference esrel 2015 held 7 10 september 2015 in zurich switzerland including 570 papers on theories and methods in the area of risk safety and reliability and their applications to a wide range of industrial civil and social sectors this book will be of interest to academics and professionals involved or interested in aspect of risk safety and reliability in various engineering areas

many developing countries including the least developed countries have attracted only small amounts of foreign direct investment fdi despite their efforts at economic liberalisation in an increasingly globalising world unctad has prepared this three volume manual with the aim of helping developing countries to enhance the capacity of their government agencies to compile analyse and disseminate data on fdi and the operations of transnational corporations tncs based on internationally recommended standards the volumes are fdi flow and stock data statistics on the operations of transnational corporations and collecting and reporting fdi tnc statistics institutional issues this volume i stresses the importance of collecting data on fdi flows and stocks in line with international definitions and standards it provides definitions and an overview of the existing standards set or used by international organisations and national compilers and discusses and evaluates different approaches to compiling fdi flow and stock data identifies data complexities and problems and presents solutions to each of them

lees process safety essentials is a single volume digest presenting the critical practical content from lees loss prevention for day to day use and reference it is portable authoritative affordable and accessible ideal for those on the move students and individuals without access

to the full three volumes of lees this book provides a convenient summary of the main content of lees primarily drawn from the hazard identification assessment and control content of volumes one and two users can access essentials for day to day reference on topics including plant location and layout human factors and human error fire explosion and toxic release engineering for sustainable development and much more this handy volume is a valuable reference both for students or early career professionals who may not need the full scope of lees and for more experienced professionals needing quick convenient access to information boils down the essence of lees the process safety encyclopedia trusted worldwide for over 30 years provides safety professionals with the core information they need to understand the most common safety and loss prevention challenges covers the latest standards and presents information including recent incidents such as texas city and buncefield

vols for 1946 47 include as sect 2 of a regular no world oil atlas

the work consisted of the development of a reliability analysis capable of generating blowout probability predictions for artificial island and drillship drilling systems used for exploratory drilling in the south beaufort sea human environmental and equipment failure risk factors were considered in the analysis the first phase of the work entailed collection and quantification of equipment and operator data on each of the systems together with associated meteorological and geological conditions the second phase consisted of a direct probabilistic risk analysis utilizing the fault tree technique in this technique only the probability of the most basic events need be specified calculation of an ever increasing hierarchy of event probabilities up to a blowout event is then carried out using a digital network based on probabilistic logic the fault tree networks were modelled by means of a computer program to facilitate repetitive calculations of different ranges of input values required for the performance of a sensitivity analysis to identify the most critical factors in the risk system blowout probabilities were found to range from 0015 per well for a blowout probably devoid of oil to 0000023 for one associated with a major uncontained oil discharge drillship blowouts can be expected approximately four times as often as artificial island blowouts human operator error was found to be the main error source in both systems and geological and environmental factors were also areas of high sensitivity an estimate of the accuracy of the predictions was made correlation of the calculated probabilities with historical world statistics was adequate
