this book builds on existing work exploring succession disturbance ecology and the interface between geophysical and biological systems in the aftermath of the 1980 eruptions of mount st helens the eruption was dramatic both in the spatial extent of impacts and the range of volcanic disturbance types and intensities complex geophysical forces created unparalleled opportunities to study initial ecological responses and long term succession processes that occur in response to a major contemporary eruption across a great diversity of ecosystems lowland to alpine forests meadows lakes streams and rivers these factors make mount st helens an extremely rich environment for learning about the ecology of volcanic areas and more generally about ecosystem response to major disturbance of many types including land management lessons about ecological recovery at

mount st helens are shaping thought about succession disturbance ecology ecosystem management and landscape ecology in the first five years after the eruption several syntheses documented the numerous intensive studies of ecological recovery the 2005 volume ecological responses to the 1980 eruption of mount st helens springer publishing was the first ecological synthesis since 1987 of the scores of ecological studies underway in the area more than half of the world s published studies on plant and animal responses to volcanic eruptions have taken place at mount st helens the 25 year synthesis which generally included investigations i e data from 1980 2000 made it possible to more thoroughly analyze initial stages of ecological responses and to test the validity of early interpretations and the duration of early phenomena and 35 years after the eruption it is time for many of the scientists working in the first three decade post eruption period to pass the science baton to the next generation of scientists to work at mount st helens and a synt hesis a t this time of transfer of responsibility to a younger cohort of scientists will be an enormous asset to the continuation of work at the volcano

for close to four decades murray bookchin s eco anarchist theory of social ecology has inspired philosophers and activists working to link environmental concerns with the desire for a free and egalitarian society new veins of social ecology are now emerging both extending and challenging bookchin s ideas for this instructive book andrew light has assembled leading theorists to contemplate the next steps in the development of social ecology topics covered include reassessing ecological ethics combining social ecology and feminism building decentralized communities evaluating new technology relating theory to activism and improving social ecology through interaction with other left traditions

is ecology at a crossroad after three decades of rapid though somewhat anarchic development many ecologists now are beginning to ask this question they have the feeling of no longer belonging to a unified and mature scientific discipline many of them

claim to be mere empiricists whereas others are proud to be considered theoreticians each side has its own journals and holds its own specialists meetings tending to disregard the achievements of the other the communication gap between the two schools is quickly widening to the detriment of both to make things worse the word ecology now has a different meaning for the professional biologists and the general public ecology is still considered as a creditable though rather soft scientific discipline by the former whereas it is perceived as a new non conformist political philosophy by the latter empirical ecologists are fundamentally naturalists who enjoy the immense complexity of the natural world and devote their lifetimes to the description of the many adaptive characteristics morphological biological or behavioral of the hundreds of thousands of species sharing the earth with us they generally are ignorant of if not allergic to the use of any mathematical representation of living phenomena they feel that ecological theory is rapidly becoming a mathematical game that has lost any contact with the realities of life

the 1980 eruption of mount st helens caused tragic loss of life and property but also created a unique opportunity to study a huge disturbance of natural systems and their subsequent responses this book synthesizes 25 years of ecological research into of volcanic activity and shows what actually happens when a volcano erupts what the immediate and long term dangers are and how life reasserts itself in the environment

indexes journal articles in ecology and environmental science nearly 700 journals are indexed in full or in part and the database indexes literature published from 1982 to the present coverage includes habitats food chains erosion land reclamation resource and ecosystems management modeling climate water resources soil and pollution

a path breaking book the first to examine the evolution of community organizing in u s cities while embracing mobilization the contributors acknowledge the challenges inherent in globalization and the norms and values that shape contemporary american culture still they reaffirm that community organizing has an important role to play as part of a broader progressive movement

scattered over several continents the ancient lakes of the world have a unique uninterrupted history dating back beyond 100 000 years ancient lakes are in effect aquatic islands in which a complex of ecology genetics and evolutionary constraints have shaped in isolation their biotas over hundreds of thousands to millions of years the diverse faunas achieve some of the highest levels of diversity known to any habitat offering unique opportunities as natural laboratories for studying the mechanisms of evolution and speciation in situ this internationally authored volume contains the latest research results and theories to emerge from a diverse range of studies in these lakes containing exciting new findings in the ecology evolution and systematic studies of ancient lake biotas together with many suggested areas for future research it will be essential reading for all those with a general interest in ecology evolution and natural history in this volume expert scientists present the latest

results and perspectives from their research on the organisms of the ancient lakes diverse in its taxonomic coverage and themes and international in its authorship and coverage ancient lakes will appeal to all biologists interested in evolution ecology and biodiversity ancient lakes are increasingly recognised as important models of evolution and speciation this volume presents a diverse range of exciting new hypotheses and perspectives on ancient lake biotas information is included on russian and chinese faunas available in english here for the first time

environmental history has traditionally told the story of man and nature scholars have too frequently overlooked the ways in which their predominantly male subjects have themselves been shaped by gender seeing nature through gender here reintroduces gender as a meaningful category of analysis for environmental history showing how women s actions desires and choices have shaped the world and seeing men as gendered actors as well in thirteen essays that show how gendered ideas have shaped the ways in which people have represented experienced and consumed their world virginia scharff and her coauthors explore interactions between gender and environment in history ranging from colonial borderlands to transnational boundaries from mountaintop to marketplace they focus on historical representations of humans and nature on questions about consumption on environmental politics and on the complex reciprocal relations among human bodies and changing landscapes they also challenge the ecofeminist position by challenging the notion that men and women are essentially different creatures with biologically different destinies each article shows how a person or group of people in history have understood nature in gendered terms and acted accordingly often with dire consequences for other people and organisms here are considerations of the ways we study sexuality among birds of william byrd s masking sexual encounters in his account of an eighteenth century expedition of how the ecology of fire in a changing built environment has reshaped firefighters own gendered identities some are playful as in a piece on the evolution of snow bunnies to shred betties others are dead serious as in a chilling portrait of how endocrine disrupters are reinventing humans animals and water systems from the cellular level out aiding and adding significantly to the enterprise of environmental history seeing nature through gender bridges gender history and environmental history in unexpected ways to show us how the natural world can remake the gendered patterns we ve engraved on ourselves and on the planet
