this book forms the proceedings of the international conference held in vienna in
 november 1992 dealing with ageing fatigue and fracture of concrete and concrete

structures special sections cover demolition and recycling and anchorage engineering as well as selected international contributions five specially invited plenary papers are included from austria spain japan denmark and sweden

polyvinylchloride 2 lyon villeurbanne 1976 is a collection of lectures presented at the second international symposium on polyvinylchloride held in lyon villeurbanne france on july 5 9 1976 this book is divided into seven chapters and begins with a survey of chemical modifications for improved mechanical properties and thermal stability of polyvinylchloride pvc including crosslinking chlorination graft polymerization and stabilization the subsequent chapters examine the solution properties rheology processing and structure of pvc these topics are followed by discussions of the effect of some defects on static strength and the stress cracking resistance of rigid pvc as well as the heat and light stabilization of pvc particularly the mode of action of stabilizers the final chapter considers the thermal decomposition and combustion mechanisms of pvc this book will prove useful to polymer chemists researchers and students

this monograph deals with the part of the field of experimental rock deformation that is dominated by the phenomena of brittle fracture on one scale or another thus a distinction has been drawn between the fields of brittle and ductile behaviour in rock corresponding more or less to a distinction between the phenomena of fracture and flow the last chapter deals with the transition between the two fields in this new edition an attempt has been made to take into account new developments of the last two and a half decades to assist in this project the original author greatly appreciates being joined by the second author the scope of the monograph is limited to the mechanical properties of rock viewed as a material on the laboratory scale thus the topic and approach is of a materials science kind rather than of a structures kind we are dealing with only one part of the wider field of rock mechanics a field which also includes structural or boundary value problems for example those of the stability of slopes the collapse of mine openings earthquakes the folding of stratified rock and the convective motion of the earth's mantle one topic thus excluded is the role of jointing which it is commonly necessary to take into account in applications in engineering and mining and probably often in geology too shock phenomena have also not been covered

the french english volume of this highly acclaimed set consists of some 100 000 keywords in both french and english drawn from the whole range of modern applied science and technical terminology covers over 70 subject areas from engineering and chemistry to packaging transportation data processing and much more

the fundamental behavior of brittle nonmetallic ceramics was probed materials studied included poly and single crystals of mgo beo and two grades of al₂o₃ the

statistical fracture was found to be characterized by the weibull theory the effect of strain rates from 10 to the minus 7th power to 10 reciprocal seconds at from 75 to 1800 f on the fracture stress in bending was determined experimentally the effects of non uniform stress fields of microstructure and of surface energy were investigated
