over the past three decades studies investigating heritage speaker's linguistic competencies have shown time and again that despite being L1 or L2 native speakers of their home language, their outcomes display variation across a wide spectrum of differences as compared to each other, other types of bilinguals as well as their monolingual peers. Studies have traditionally used mostly behavioral methodologies rooted in adjacent established fields, e.g. L1 acquisition, adult L2 acquisition, offering in addition to documenting and describing their performance, important insights for linguistic theory and challenges related to home minority language maintenance, contact, policy, and more. A bird's-eye view makes it clear that the methodologies one uses to tap into their linguistic knowledge areas, if not more, are important than the phenomena under investigation, especially in light of how their unique experiences with their heritage and other languages are present across a continuum.

In light of ongoing globalization and the post-pandemic recovery period, organizational innovativeness is becoming a strategic necessity for many organizations to survive and thrive in contemporary business environments. In achieving innovativeness, organizations have become reliant on the discretionary and non-conformity extra-role behaviors of their employees that go beyond employee role expectations. Employee creativity and innovativeness represent two such behaviors deemed critical for organizational innovativeness. Employee creativity can be viewed as the cognitive and behavioral processes applied when attempting to generate novel ideas, and employee innovativeness as the processes applied when attempting to implement new ideas. A particular challenge for organizations is understanding how behaviors emerge and how they can be sustained through appropriate structures and processes. Such challenges are even more profound given that employees may not be willing to engage in such behaviors due to often significant

personal costs associated with engaging in them given the growing importance of employee creative and innovative behaviors to organizational success and survival numerous studies have examined their antecedents in order to develop theoretical models and evidence based guidance for enhancing employee creativity and innovativeness a fundamental issue among such studies is that they have mainly focused on specific elements of organizational cultures and or leadership styles this has often resulted in an incomplete understanding of how such complex behaviors actually emerge
