industries that use pumps seals and pipes will also use valves and actuators in their systems this key reference provides anyone who designs uses specifies or maintains valves and valve systems with all of the critical design specification performance and operational information they need for the job in hand brian nesbitt is a well known consultant with a considerable publishing record a lifetime of experience backs up the huge amount of practical detail in this volume valves and actuators are widely used across industry and this dedicated reference provides all the information plant designers specifiers or those involved with maintenance require practical approach backed up with technical detail and engineering know how makes this the ideal single volume reference compares and contrasts valve and actuator types to ensure the right equipment is chosen for the right application and properly maintained

the latest update to bela liptak s acclaimed bible of instrument engineering is now available retaining the format that made the previous editions bestsellers in their own right the fourth edition of process control and optimization continues the tradition of providing quick and easy access to highly practical information the authors are practicing engineers not theoretical people from academia and their from the trenches advice has been repeatedly tested in real life applications expanded coverage includes descriptions of overseas manufacturer s products and concepts model based optimization in control theory new major inventions and innovations in control valves and a full chapter devoted to safety with more than 2000 graphs figures and tables this all inclusive encyclopedic volume replaces an entire library with one authoritative reference the fourth edition brings the content of the previous editions completely up to date incorporates the developments of the last decade and broadens the horizons of the work from an american to a global perspective béla g lipták speaks on post oil energy technology on the at t tech channel

were published in the series as the contributed volume process control performance assessment from theory to implementation with andrzej ordys damian uduehi and michael johnson as editors isbn 978 1 84628 623 0 2007 along with this good progress in process controller assessment methods researchers have also been investigating techniques to diagnose what is causing the process or control loop degradation this requires the use of on line data to identify faults via new diagnostic indicators of typical process problems a significant focus of some of this research has been the issue of valve problems a research direction that has been motivated by some industrial statistics that show up to 40 of control loops having performance degradation attributable to valve problems shoukat choudhury sirish shah and nina thornhill have been very active in this research

field for a number of years and have written a coherent and consistent presentation of their many research results as this monograph diagnosis of process nonlinearities and valve stiction the advances in industrial control series is pleased to welcome this new and substantial contribution to the process diagnostic literature the reader will find the exploitation of the extensive process data archives created by today's process computer systems one theme in the monograph from another viewpoint the use of higher order statistics could be considered to provide a continuing link to the earlier methods of the statistical process control paradigm
