as many regions of the united states experience rising temperatures consumers have come to rely increasingly on cooling appliances including portable air conditioners to provide a comfortable indoor temperature home occupants sometimes use a portable air conditioner pac to maintain a desired indoor temperature in a single room or enclosed space although pacs in residential use are few compared to centrally installed and room air conditioning ac units the past few years have witnessed an increase of pacs use throughout the united states there is however little information and few research projects focused on the energy consumption and performance of pacs particularly studies that collect information from field applications of pacs the operation and energy consumption of pacs may differ among geographic locations and households because of variations in cooling load frequency duration of use and other user selected settings in addition the performance of building envelope thermal mass and air leakage as well as inter

zonal mixing within the building would substantially influence the ability to control and maintain desirable indoor thermal conditions. Lawrence Berkeley National Laboratory LBNL conducted an initial field metering study aimed at increasing the knowledge and data related to PAC operation and energy consumption in the United States.
