mathematical modeling is the art and craft of building a system of equations that is both sufficiently complex to do justice to physical reality and sufficiently simple to give real insight into the situation mathematical modeling a chemical engineer s perspective provides an elementary introduction to the craft by one of the century s most distinguished practitioners though the book is written from a chemical engineering viewpoint the principles and pitfalls are common to all mathematical modeling of physical systems seventeen of the author s frequently cited papers are reprinted to illustrate applications to convective diffusion formal chemical kinetics heat and mass transfer and the philosophy of modeling an essay of acknowledgments asides and footnotes captures personal reflections on academic life and personalities describes pitfalls as well as principles of mathematical modeling presents twenty examples of engineering problems features seventeen reprinted papers presents personal reflections on some of the great natural philosophers emphasizes modeling procedures that precede extensive calculations

catalysts are required for a variety of applications industrialists and academics are increasingly challenged to find cost effective and environmentally benign catalysts to use this volume looks at modern approaches to catalysis and critically reviews the extensive literature on areas such as catalysts derived from waste materials determining the pore structure of activated carbon by nitrogen gas adsorption and a new tool to explore catalytic reaction mechanisms the catalytic shock tube with an emphasis on interdisciplinary content this book is aimed at catalytic science and engineering research

since its inception in 1945 this serial has provided critical and integrating articles written by research specialists that integrate industrial analytical and technological aspects of biochemistry organic chemistry and instrumentation methodology in the study of carbohydrates the articles provide a definitive interpretation of the current status and future trends in carbohydrate chemistry and biochemistry features contributions from leading authorities and industry experts informs and updates on all the latest developments in the field

animals show a natural tendency to explore novel as opposed to familiar stimuli suggesting an underlying memory process in regard to previously encoded information dependent on this tendency spontaneous object exploration paradigms have been developed in animals to measure memory processes regarding what an object is where an object is located when an object is present the association of an object and its location in which context an object is shown and an episodic context of the combined what where when components these paradigms feature in the absence of extensive training and reward or aversive incentives analogous to incidental encoding of daily memory the application of these object exploration tests is broad and covers many fields such as behavioral neuroscience psychopharmacology and the neurobiology of recognition memory across species the medial prefrontal cortex parietal cortex and medial temporal lobe the hippocampus entorhinal cortex perirhinal cortex and parahippocampal cortex are the main neuroanatomical structures that are considered to underlie recognition memory however the retrosplenial cortex insular cortex anterior thalamus nucleus reuniens of thalamus striatum and amygdala are also considered to play a part as well recent findings also indicate that the lateral hypothalamus interpeduncular nucleus and cerebellum contribute to recognition memory under certain conditions neurotransmitter systems actively mediate and orchestrate the neuronal communication between these structures during the processing of learning and memory an entire picture of the neuroanatomy and neurobiology of recognition memory will however require multidisciplinary approaches of imaging lesion pharmacology optogenetics chemogenetics and behavioral studies

recognition memory deficits are also major symptoms in multiple neuropsychiatric and neurodegenerative disorders such as schizophrenia attention deficit hyperactivity disorder depressive disorder bipolar disorder autism spectrum disorder parkinson s disease dementia and alzheimer s disease although the etiology of the shared memory deficits is not fully understood it may be associated with environmental pharmacological and genetic factors that are commonly exposed to these disorders spontaneous object exploration paradigms with minimal involvement of emotional valences are appropriate in the study of neuropsychiatric and neurodegenerative disorders as these disorders may sensitize one to emotional stimuli leading to a deficit in recognition memory given the impact of these disorders and their memory deficits on our society there is a strong need to understand the underlying mechanisms and development of innovative pharmaceuticals and gene therapeutics
