this book is written for you if you want to learn the industrial engineering basics about the necessary tools for engineers and activities done by industrial engineers if you want to work as an industrial engineer in a garment factory by learning industrial engineers subject you can bring changes and bring improvement in the factory where you work an engineering degree is not necessary to improve factories productivity and reducing manufacturing costs what is required is the right attitude if you allow yourself to learn industrial engineering tools you can learn most of them in one month then you can practice these ie tools and ie activities in the next 3 months after that you are ready for serving the factory you can make things better

as consumer demands for specific attributes in their textiles increase and global competition intensifies it is important that the industry finds ways of engineering certain performance requirements into textiles and apparel this book reviews how fabrics and garments can be engineered to meet technical performance and other characteristics required for the specific end use chapters begin with fabric and garment handle and making up performance followed by wear appearance issues such as wrinkling pilling and bagging further chapters include fabric and garment drape durability related issues as well as physiological and psychological comfort key topics of fire retardancy waterproofing breathability and ultraviolet protection are also discussed written by two highly distinguished authors this is an invaluable book for a wide range of readers in the textile and apparel industries ranging from textile and garment manufacturers designers researchers developers to buyers reviews the engineering of fabrics to meet technical performance requirements for specific end use chapters examine various wear appearance issues such as wrinkling bagging and fabric and garment drape discusses durability related issues including fire retardancy and waterproofing as well as psychological and physiological fabric comfort

while there is pressure from buyers inclination within self to do better and a heightened aspiration among apparel manufacturers to use industrial engineering ie like other more

industrialized sectors there is no specific book as such dealing with ie in relation to apparel manufacturing the existing books that are already written on ie possess academic rigour and generic functions applicable across industries thus making it difficult for the practitioners to refer and clear discrete doubts related to apparel manufacturing undoubtedly work study is the centrepiece of industrial engineering however apart from work study industrial engineers in apparel industry are also supposed to perform various other functions like preparing operation breakdown and operation flow chart selecting machine type and attachment and workaids planning machine layout for maximizing unidirectional material movement optimising inventory and storage space and maintaining workplace health and safety these are some of the areas that often lack significant attention this practitioner s handbook is an amalgamation of theory and practices including steps of implementation and common mistakes a balanced approached is taken to make it equally meaningful and useful for the academics as well as the industry a unique section titled industry practices is incorporated at the end of each chapter which shares the typical practices constraints and benefits accrued by the industry which will give meaningful insight to the readers and help them relate theory with actual practice

there is surely a bridge between the management goal and the performance of employees working to achieve that goal be it any industry and the apparel sector is not an exception designing a workplace that can bridge this gap to deliver the maximum output is an important area of concern though there are many technologies available in the market today that can help the organizations to overcome the challenges and compete with their competitors one of the major challenges is the cost associated with technologies which makes it difficult to be opted by small manufacturers and secondly the lack of technical know how as well as understanding of the technology one of the proven solutions is changing the workplace into an engineered workplace that can help the manufacturers in achieving the desired goals and targets with maximum efficiency and effectiveness this series will take the garment manufacturers through a number of articles that will help them identify new ways and methodologies that will result in improved productivity and the key of all the articles remains the same re engineering the current workplace into a workstation
