architecture knowledge management akw aims to codify and maintain the architectural knowledge of a software system in a form that can be easily accessed by different stakeholders integrating akw with an agile project management paradigm is a challenge because the agile philosophy downplays both plan driven development and documentation yet by integrating lightweight akw practices with the process agile software development could avoid maintenance and communication problems arising from scarce documentation in this chapter we introduce existing technologies that could be used as elements of lightweight akw for agile software development and present possible models to integrate akw with scrum which is the most popular agile approach in use today in particular we advocate the exploitation of architectural evaluations to collect architecturally significant information semiautomatically and the use of automated document generation to expose the contents of an architectural information repository in an easily accessible form the proposed models are based on observed architecting work practices in industry and on interviews carried out in industry to identify the architectural information flow in real life agile projects
