die mensch-maschine-schnittstellen hmis von infotainmentsystemen der heutigen premiumfahrzeuge sind sehr komplexe und eingebettete systeme sie haben im vergleich mit herkömmlichen pc-applikationen besondere eigenschaften insbesondere bezogen auf ihre variabilität die variabilität von infotainmentsystem hmis ergibt sich aus unterschiedlichen fahrzeugmodellen produktserien märkten ausstattungen system sowie sprachvarianten die hohe anzahl der varianten führt zu enorm hohem testaufwand modellbasiertes testen ist ein vielversprechender ansatz um den testaufwand durch die automatische

testfallgenerierung und testausführung zu reduzieren und gleichzeitig die testabdeckung zu erhöhen während modellbasiertes testen bereits für funktionstests häufig eingesetzt wird bleiben hmi tests meist noch manuell oder teil automatisiert außerdem kann durch manuelles testen eine systematische testabdeckung nur sehr schwierig erreicht werden zahlreiche forschungsarbeiten befassen sich mit dem gui testen variabilität ist im bereich der software produktentwicklung ein immer beliebteres forschungsthema ein modellbasierter testansatz für komplexe hmis mit berücksichtigung der variabilität ist allerdings immer noch nicht vorhanden diese doktorarbeit präsentiert eine modellbasierte testmethode für infotainmentsystem hmis mit dem besonderen ziel das variabilitätsproblem zu lösen zusätzlich bietet diese doktorarbeit eine basis für zukünftiges hmi testen in der industrie an der ansatz in dieser doktorarbeit basiert auf einem modellbasiertem hmi testframework das zwei essentielle komponenten beinhaltet eine test orientierte spezi kation und eine komponente zur testgenerierung die test orientierte spezi kation hat eine geschichtete struktur und ist darauf ausgerichtet die fürs testen relevanten daten zu spezi zieren sowohl dynamisches men verhalten als auch die darstellung des hmi sind die testziele die testgenerierung erzeugt automatisch tests aus der test orientierten hmi spezi kation das testframework kann um eine automatische testausf hrung erweitert werden nachdem die generierten tests instanziiert werden ist es m glich sie automatisch innerhalb eines testautomatisierungsframeworks durchzuf hren diese doktorarbeit befasst sich mit methoden um die hmi varianten effizient zu spezifizieren und zu testen und basiert auf ansatz f r software produktlinien das bedeutet die test orientierte spezi kation ist erweitert um sowohl die gemeinsamkeiten als auch die spezialit ten der varianten zu beschreiben insbesondere werden strategien entwickelt um tests f r unterschiedliche varianten der produktlinien automatisch zu generieren die besonderheit dabei ist dass redundanzen sowohl f r den generierungsvorgang als auch den ausf hrungsvorgang vermieden werden k nnen das ist wegen den eingeschr nkten ressourcen und aus effizienzgr nden besonders wichtig f r die industrie die modellierung und das testen von variantenreichen hmis stellen die hauptbeitr ge dieser dissertation dar die ergebnisse dieser doktorarbeit k nnen hoffentlich als eine l sung f r modellbasiertes testen der multi varianten hmis dienen und der automotive industrie eine basis der zuk nftigen hmi testenstandards liefern the human machine interfaces hmis of today s premium automotive infotainment systems are complex embedded systems which have special characteristics in comparison to guis of standard pc applications in particular regarding their variability the variability of infotainment system hmis results from different car models product series markets equipment configuration possibilities system types and languages and necessitates enormous testing efforts the model based testing approach is a promising solution for reducing testing efforts and increasing test coverage however while model based testing has been widely used for function tests of subsystems in practice hmi tests have remained manual or only semi automated and are very time consuming and work intensive also it is very difficult to achieve systematic or high test coverage via manual tests a large amount of research work has addressed gui testing in recent years in addition variability is becoming an ever more popular topic in the domain of software product line development however a model based testing approach for complex hmis which also considers variability is still lacking this thesis presents a modelbased testing approach for infotainment system hmis with the particular aim of resolving the variability problem furthermore the thesis provides a foundation for future standards of hmi

testing in practice the proposed approach is based on a model based hmi testing framework which includes two essential components a test oriented hmi specification and a test generation component the test oriented hmi specification has a layered structure and is suited to specifying data which is required for testing different features of the hmi both the dynamic behavior and the representation of the hmi are the testing focuses of this thesis the test generation component automatically generates tests from the test oriented hmi specification furthermore the framework can be extended in order to automatically execute the generated tests generated tests must first be initialized which means that they are enhanced with concrete user input data afterwards initialized tests can be automatically executed with the help of a test execution tool which must be extended into the testing framework in this thesis it is proposed to specify and test different hmi variants which have a large set of commonalities based on the software product line approach this means the test oriented hmi specification is extended in order to describe the commonalities and variabilities between hmi variants of an hmi product line in particular strategies are developed in order to generate tests for different hmi products one special feature is that redundancies are avoided both for the test generation and the execution processes this is especially important for the industrial practice due to limited test resources modeling and testing variability of automotive hmis make up the main research contributions of this thesis we hope that the results presented in this thesis will offer gui testing research a solution for model based testing of multi variant hmis and provide the automotive industry with a foundation for future hmi testing standards

handbook of human machine systems insightful and cutting edge discussions of recent developments in human machine systems in handbook of human machine systems a team of distinguished researchers delivers a comprehensive exploration of human machine systems hms research and development from a variety of illuminating perspectives the book offers a big picture look at state of the art research and technology in the area of hms contributing authors cover brain machine interfaces and systems including assistive technologies like devices used to improve locomotion they also discuss advances in the scientific and engineering foundations of collaborative intelligent systems and applications companion technology which combines trans disciplinary research in fields like computer science ai and cognitive science is explored alongside the applications of human cognition in intelligent and artificially intelligent system designs human factors engineering and various aspects of interactive and wearable computers and systems the book also includes a thorough introduction to human machine systems via the use of emblematic use cases as well as discussions of potential future research challenges comprehensive explorations of hybrid technologies which focus on transversal aspects of human machine systems practical discussions of human machine cooperation principles and methods for the design and evaluation of a brain computer interface perfect for academic and technical researchers with an interest in hms handbook of human machine systems will also earn a place in the libraries of technical professionals practicing in areas including computer science artificial intelligence cognitive science engineering psychology and neurobiology

t his book constitutes the proceedings of the 36th international conference on architecture of computing systems arcs 2023 which took place in athens greece in june 2023 the 18 full papers in this volume were carefully reviewed and selected from 35 submissions arcs provides a platform covering newly emerging and cross cutting topics such as autonomous and ubiquitous systems reconfigurable computing and acceleration neural networks and artificial intelligence the selected papers cover a variety of topics from the arcs core domains including energy efficiency applied machine learning hardware and software system security reliable and fault tolerant systems and organic computing back to top

whether you re a seasoned enthusiast or just starting your restoration journey this book will guide you through every aspect of the process from selecting the right project vehicle to the final assembly and detailing inside you ll find step by step instructions for every stage of the restoration from bodywork and rust repair to engine and drivetrain reconstruction expert insights and helpful tips from experienced restorers stunning photography and illustrations that showcase the transformation process comprehensive coverage of all major restoration topics including assessing the condition of a potential donor vehicle creating a detailed restoration plan gathering the necessary tools and materials removing rust and restoring sheet metal shaping and welding new panels preparing the body for paint rebuilding engines and overhauling transmissions upgrading brakes and suspension troubleshooting electrical issues replacing wiring and components installing new upholstery and restoring dashboards aligning wheels and tires detailing the exterior and interior and much more whether you re a professional mechanic or a passionate hobbyist this book is your go to resource for everything automotive restoration if you like this book write a review
