architecture of health is a story about the design and life of hospitals about how they are born and evolve about the forces that give them shape and the shifts that conspire to render them inadequate reading architecture through the history of hospitals is a deciphering tool for unlocking the elemental principles of architecture and the intractable laws of human and social conditions that architecture serves in each of our lives this book encounters brilliant and visionary designers who were hospital architects but also systems designers driven by the aim of social change they faced the contradictions of health care in their time and found innovative ways to solve for specific medical dilemmas less known designers like filarete lluis domènech i montaner albert schweitzer max fry and jane drew john dawe tetlow gordon friesen thomas wheeler and eberhard zeidler are studied here while the medical spaces of more widely known architects like isambard brunel alvaro alto le corbusier louis kahn and paul rudolph also help inform this history all these characters were polymaths and provocateurs but none quite summarizes this history more succinctly than florence nightingale who in laying out her guidelines for ward design in 1859 shows how the design of a medical facility can influence an entire political and social order architecture of health richly illustrated with images and never before published renderings and drawings from the mass design group charts historical epidemics alongside modern and contemporary architectural transformations in service of medicine health and habitation it explores how infrastructure facilitates healing and architecture's greater role in constructing our societies

the covert life of hospital architecture addresses hospital architecture as a set of interlocked overlapping spatial and social conditions it identifies ways that planned for and latent functions of hospital spaces work jointly to produce desired outcomes such as greater patient safety increased scope for care provider communication and more intelligible corridors by advancing space syntax theory and methods the volume brings together emerging research on hospital environments opening with a description of hospital architecture that emphasizes everyday relations the sequence of chapters takes an unusually comprehensive view that pairs spaces and occupants in hospitals the patient room and its intervisibility with adjacent spaces care teams and on ward support for their work and the intelligibility of public circulation spaces for visitors the final chapter moves outside the hospital to describe the current healthcare crisis of the global pandemic as it reveals how healthcare institutions must evolve to be adaptable in entirely new ways reflective essays by practicing designers follow each chapter bringing perspectives from professional practice into the discussion the covert life of hospital architecture makes the case that latent dimensions of space as experienced have a surprisingly strong link to measurable outcomes providing new insights into how to better design hospitals through principles that have been tested empirically it will become a reference for healthcare planners designers architects and administrators as well as for readers from sociology psychology and other areas of the social sciences

publisher description

the authors rich professional wealth of experience and holistic approach allow profound insights and interesting perspectives on the subject of hospital architecture and design

more than any other building type in the twentieth century the hospital was connected to transformations in the health of populations and expectations of lifespan from the scale of public health to the level of the individual the architecture of the modern hospital has reshaped knowledge about health and disease and perceptions of bodily integrity and security however the rich and genuinely global architectural history of these hospitals is poorly understood and largely forgotten this book explores the rapid evolution of hospital design in the twentieth century analysing the ways in which architects and other specialists reimagined the modern hospital it examines how the vast expansion of medical institutions over the course of the century was enabled by new approaches to architectural design and it highlights the emerging political conviction that physical health would become the cornerstone of human welfare

in the history of medicine hospitals are usually seen as passive reflections of advances in medical knowledge and technology in medicine by design annmarie adams challenges these assumptions examining how hospital design influenced the development of twentieth century medicine and demonstrating the importance of these specialized buildings in the history of architecture at the center of this work is montreal s landmark royal victoria hospital built in 1893 drawing on a wide range of visual and textual sources adams uses the royal vic along with other hospitals built or modified over the next fifty years to explore critical issues in architecture and medicine the role of gender and class in both fields the transformation of patients into consumers the introduction of new medical concepts and technologies and the use of domestic architecture and regionally inspired imagery to soften the jarring impact of high tech medicine identifying the roles played by architects in medical history and those played by patients doctors nurses and other medical professionals in the design of hospitals adams also links architectural spaces to everyday hospital activities from meal preparation to the ways in which patients entered the hospital and awaited treatment methodologically and conceptually innovative medicine by design makes a significant contribution to the histories of both architectural and medical practices in the twentieth century annmarie adams is william c macdonald professor of architecture at mcgill university and the author of architecture in the family way doctors houses and women 1870 1900 and coauthor of designing women gender and the architectural profession

in the 1960s and 1970s large high technology inpatient oriented hospitals reflected the central role of such facilities in an expanding healthcare system but hospital architecture and the healthcare system have vastly changed since then in profound and unpredicted ways this book explores for the first time how and why acute care hospitals and the often related psychiatric facilities retirement communities and community clinics have been transformed during the final decades of the twentieth century the authors also consider utopian visions of unbuilt work and look ahead to the possible healthcare landscape of the future health villages home based care for the aging and aged population and cyberclinics and virtual hospitals
