to see objects that live in the fourth dimension we humans would need to add a fourth dimension to our three dimensional vision an example of such an object that lives in the fourth dimension is a hyper sphere or 3 sphere the quest to imagine the elusive 3 sphere has deep historical roots medieval poet dante alighieri used a 3 sphere to convey his allegorical vision of the christian afterlife in his divine comedy in 1917 albert einstein visualized the universe as a 3 sphere describing this imagery as the place where the reader's imagination boggles nobody can imagine

this thing over time however understanding of the concept of a dimension evolved by 2003 a researcher had successfully rendered into human vision the structure of a 4 web think of an ever increasingly dense spider s web in this text stephen lipscomb takes his innovative dimension theory research a step further using the 4 web to reveal a new partial image of a 3 sphere illustrations support the reader s understanding of the mathematics behind this process lipscomb describes a computer program that can produce partial images of a 3 sphere and suggests methods of discerning other fourth dimensional objects that may serve as the basis for future artwork
