managing customer experiences in an omnichannel world explores how organizations integrating both the physical and virtual environments for consumers will enable them to effectively manage the customer experience

raising the average human lifespan by a decade or more will change our world the future is not about whether this will happen it is about what we should do when it happens even the most pessimistic assertions about the future of our environment are underestimating the extent of the problem there is simply no model in which more years of life does not equate to more people and in which that does not lead to more crowding environmental degradation more consumption and more waste hence as we prolong life these environmental crises will be further exacerbated with current diets and production practices feeding 7.6 billion people is degrading terrestrial and aquatic ecosystems depleting water resources and driving climate changes the challenges of today are not just population and it's not just consumption it is waste also thanks to things such as cars planes big homes deforestation and so forth the annual carbon dioxide emissions of an average are three times as high as it should be it is likely that this signals that the current level of dividends is unsustainable hence we use and return little of value to our natural world in our book we address the questions related to environmental health challenges that include contamination of air water and soil and car transportation in order to better understand natural industrial and social environmental hazards we have to think of them in a broader context i.e. physical chemical biological and cultural we hope that the presented publication gives the reader a broader perspective on the issues related to environmental health challenges in contemporary society in the coming years

this book proposes the concept of urban multiple habitats and then analyzes its corresponding classification function and potential supply capability it provides an analysis framework for studying the relationship between urban biodiversity and built environment and for considering the loss of urban habitats caused by high density development it argues that urban biodiversity is a key indicator for assessing urban ecosystem services on this basis the book then presents a case study mainly focusing on wild birds in shanghai as urban wild birds and their species could be viewed as an essential indicator for evaluating healthy ecosystem of contemporary cities based on the empirical findings the book proposes an assessment model for urban biodiversity performance and a range of principles strategies and key indicators regarding the optimization of urban planning and design practice to enhance urban biodiversity performance
