the second half of this century will remain as the era of proliferation of electronic computers they did exist before but they were mechanical during next century they may perform other mutations to become optical or molecular or even biological actually all these aspects are only fancy dresses put on mathematical machines this was always recognized to be true in the domain of software where machine or high level languages are more or less rigorous but immaterial variations of the universally accepted mathematical language aimed at specifying elementary operations functions algorithms and processes but even a mathematical machine needs a physical support and this is what hardware is all about the invention of hardware description languages hdl s in the early 60 s was an attempt to stay longer at an abstract level in the design process and to push the stage of physical implementation up to the moment when no more technology independent decisions can be taken it was also an answer to the continuous exponential growth of complexity of systems to be designed this problem is common to hardware and software and may explain why the syntax of hardware description languages has followed with a reasonable delay of ten years the evolution of the programming languages at the end of the 60 s they were algol like a decade later pascal like and now they are c or ada like they have also integrated the new concepts of advanced software specification languages

a unique feature of this open access textbook is to provide a comprehensive introduction to the fundamental knowledge in embedded systems with applications in cyber physical systems and the internet of things it starts with an introduction to the field and a survey of specification models and languages for embedded and cyber physical systems it provides a brief overview of hardware devices used for such systems and presents the essentials of system software for embedded systems including real time operating systems the author also discusses evaluation and validation techniques for embedded systems and provides an overview of techniques for mapping applications to execution platforms including multi core platforms embedded systems have to operate under tight constraints and hence the book also contains a selected set of optimization techniques including software optimization techniques the book closes with a brief survey on testing this fourth edition has been updated and revised to reflect new trends and technologies such as the importance of cyber physical systems cps and the internet of things iot the evolution of single core processors to multi core processors and the increased importance of energy efficiency and thermal issues

the international conference on geological information represents the first major attempt to bring together geoscience information specialists from allover the world the purpose of the conference was to assess the current state of the art in geoscience information from both the regional and functional point of view it was hoped that the conference could take steps to bring about increased international cooperation and

collaboration in the field of geological information the papers ranged over the whole spectrum of documentation from primary publishing back to the user including data perhaps a keyword for the conference might be cooperation the idea of and need for cooperation was stressed in almost every talk the final panel session was devoted to a discussion on the formation of a proposed international association for geological information despite the growing pressure on information managers stimulated by increasing international activities in geology the global perspective of plate tectonics and worldwide concern for the availability of non renewable resources there does not exist an international organisation specifically concerned with geological information delegates agreed that there was no need for a new professional society of individuals but that a federation or similar organisation might be desirable in the final session it became apparent that if the geological information community is to make the best use of all the systems and developments available there is very clearly a need to know what exists in all these areas at present an urgent task is to identify these systems
