in this major theoretical statement the author offers a new and provocative interpretation of the institutional transformations associated with modernity we do not as yet he argues live in a post modern world rather the distinctive characteristics of our major social institutions in the closing period of the twentieth century express the emergence of a period of high modernity in which prior trends are radicalised rather than undermined a post modern social universe may eventually come into being but this as yet lies on the other side of the forms of social and cultural organization which currently dominate world history in developing an account of the nature of modernity giddens concentrates upon analyzing the intersections between trust and risk and security and danger in the modern world both the trust mechanisms associated with modernity and the distinctive risk profile it produces he argues are distinctively different from those characteristic of pre modern social orders this book build upon the author s previous theoretical writings and will be of fundamental interest to anyone concerned with giddens s overall project however the work covers issues which the author has not previously analyzed and extends the scope of his work into areas of pressing practical concern this book will be essential reading for second year undergraduates and above in sociology politics philosophy and cultural studies
