this book by a world authority explores why building cycles occur and how they affect the behaviour of real estate markets the central argument put

forward is that growth and instability are inextricably linked and that building investment acts both as a key driver of growth and as the source of the most volatile cyclical fluctuations in an economy book jacket

every 3rd issue is a quarterly cumulation

macroeconomic policy is one of the most important policy domains and the tools of macroeconomics are among the most valuable for policy makers yet there has been up to now a wide gulf between the level at which macroeconomics is taught at the undergraduate level and the level at which it is practiced at the same time doctoral level textbooks are usually not targeted at a policy audience making advanced macroeconomics less accessible to current and aspiring practitioners this book born out of the masters course the authors taught for many years at the harvard kennedy school fills this gap it introduces the tools of dynamic optimization in the context of economic growth and then applies them to a wide range of policy questions ranging from pensions consumption investment and finance to the most recent developments in fiscal and monetary policy it does so with the requisite rigor but also with a light touch and an unyielding focus on their application to policy making as befits the authors own practical experience advanced macroeconomics an easy guide is bound to become a great resource for graduate and advanced undergraduate students and practitioners alike
