opportunity and curiosity find similar rocks on mars one can generally understand this statement if one knows that opportunity and curiosity are instances of the class of mars rovers and recognizes that as signalled by the word on rocks are located on mars two mental operations contribute to understanding recognize how entities concepts mentioned in a text interact and recall already known facts which often themselves consist of relations between entities concepts concept interactions one identifies in the text can be added to the repository of known facts and aid the processing of future texts the amassed knowledge can assist many advanced language processing tasks including summarization question answering and machine translation semantic relations are the connections we perceive between things which interact the book explores two now intertwined threads in semantic relations how they are expressed in texts and what role they play in knowledge repositories a historical perspective takes us back more than 2000 years to their beginnings and then to developments much closer to our time various attempts at producing lists of semantic relations necessary and sufficient to express the interaction between entities concepts a look at relations outside context then in general texts and then in texts in specialized domains has gradually

brought new insights and led to essential adjustments in how the relations are seen at the same time datasets which encompass these phenomena have become available they started small then grew somewhat then became truly large the large resources are inevitably noisy because they are constructed automatically the available corpora to be analyzed or used to gather relational evidence have also grown and some systems now operate at the scale the learning of semantic relations has proceeded in parallel in adherence to supervised unsupervised or distantly supervised paradigms detailed analyses of annotated datasets in supervised learning have granted insights useful in developing unsupervised and distantly supervised methods these in turn have contributed to the understanding of what relations are and how to find them and that has led to methods scalable to sized textual data the size and redundancy of information in very large corpora which at first seemed problematic have been harnessed to improve the process of relation extraction learning the newest technology deep learning supplies innovative and surprising solutions to a variety of problems in relation learning this book aims to paint a big picture and to offer interesting details
